Subject: [External] Draft permit Questions
Date: Friday, January 17, 2020 3:33:59 PM
Attachments: image001.png

Cindy,
Bob and I finally had a chance today to compare some notes on the draft permit. Please see the following questions or corrections we see. If we need to schedule a call on Monday to discuss, we are happy to do so. Actually it might be beneficial for both of us to do so.

Solid Waste Draft permit

Paragraph 1 – correct name of property owner is "Miller Investments & Properties, LLC". (this is throughout document)

Paragraph 2 – "The processed NHIW will be transferred to a permitted municipal waste combustor or a municipal solid waste landfill for final disposal" : Some of the waste streams could also go to recycling, Composting, and or Concrete Kiln to be used as fuel. Do we need to state this?

Paragraph 3 – "All waste are maintained inside a fully enclosed process building "or within containment structures " until processing. (Can we add this language?)

Paragraph 4 – No salvage operations will be performed at the MPF. (Can you further define? We would like to be able to consolidate recyclables such as plastics and cardboard in order to recycle instead of dispose of). What is a customer ask us to keep metal drums or totes in order to Re-Use or recycle? Can we do this?

Page 5: Paragraph 14 – Correct Owner name

Page 7: F.1.a. – DEQ shall be notified by the end of the next working day of A) any waste identified and rejected prior to receipt as a prohibited waste (What scenario would this come into play?)
Should we delete (or upon disposal at the working face) since that doesn't apply?

H. Financial Assurance:
What financial instruments would you suggest? I wanted to go ahead and get this started.

Thank you, and again we are available to talk via phone if needed.

Have a nice weekend.
