

**Appendix L. PM-10 Emission Factors for Permit by Rule for Grain Elevators**  
**[REVOKED]**

$$\left[ \frac{R}{45} + \frac{S}{92} \right] \times 40 = \text{Combined Emissions (TPY)}^*$$

~~[NOTE: THE FORMULA BELOW IS A TEXT VERSION OF THE GRAPHIC FORMULA ABOVE]~~

~~———— Combined Emissions (TPY) = 40 x (R/45 + S/92)~~

~~Where, ——— R = Annual Grain Received (millions of bushels)~~

~~———— S = Annual Grain Shipped (millions of bushels)~~

~~\*To qualify for Permit by Rule, the total annual combined emissions must be less than 40 TPY.~~
