DEQ Awards Grant Money to Beggs Public Works Authority for Water System Improvements

The Oklahoma Department of Environmental Quality (DEQ) has awarded a grant to the Beggs Public Works Authority to help the water system come into compliance with federal regulations. The funding is through a DEQ grant program that is designed to assist public water supply systems that serve less than 10,000 people. Systems can use the money for planning and design services for drinking water projects from a licensed professional engineer.

The maximum grant amount available for each project application is \$125,000. Grants are awarded based upon the Drinking Water State Revolving Fund Priority System. Through this system, high consideration is given for projects to protect public health, comply with the Safe Drinking Water Act, and correct design deficiencies.

This grant will help to ensure that good clean drinking water is available for the citizens served by the Beggs Public Works Authority. Access to water in rural areas of Oklahoma adds to our quality of life," said state Sen. Roger Ballenger.

"I was extremely gratified to learn of the grant award to the Beggs water supply system. This comes at the perfect time," said state Rep. Steve Kouplen.

"This grant opportunity affords water systems the ability to plan and design projects that may not have otherwise been possible due to lack of funds," said DEQ Executive Director Steve Thompson.

More information on this grant opportunity is available at http://www.deq.state.ok.us/wqdnew/dwsrf/engineering_grant.html. Interested public water supply systems can also contact Brad Cook at (405) 702-8237 or brad.cook@deq.ok.gov.
