## Permitting Documentation

- Develop SWP3. Complete and submit NOI with application and permit fees. Submit SWP3 if required.
- SWP3 modifications must be made.
- File NOT once stabilization has been achieved or another operator has assumed control.
- Only one (1) NOT can be filed per 90 day period.
- Availability of documentation (SWP3, inspection reports, etc.) after permit closure.

## Inspection

- **24 hours**
  - Inspection and corrective action report must be completed.
  - Inspect all areas of site after rain event 0.5 inches or greater, or discharge generated by snowmelt.

- **7 days**
  - Inspection frequency for all areas of project.
  - Complete corrective actions.
  - Document any additional corrective actions (follow-up actions, control or SWP3 modifications, etc.)

- **14 days**
  - Inspection frequency for all areas of project

- **30 days**
  - Inspection frequency for stabilized areas of the project

## Stabilization

- **End of Next Workday**
  - Initiate stabilization in disturbed areas where construction activities will permanently, or temporarily, cease for 14 or more days.
  - Complete stabilization measures

- **7 days**
  - Complete stabilization measures

## Pollution Prevention

- **Prior to Construction**
  - Employee training must be conducted

- **During Construction**
  - Immediate
    - Report leaks, spills, or releases equal to or in excess of a reportable quantity.
  - End of Workday
    - Remove deposited sediment from track-out.
  - End of Next Workday
    - General maintenance on stormwater controls.
  - 7 days
    - Provide description, circumstances, and date of release.

## Monitoring

- **90 days**
  - Once per quarter, visual monitoring must be conducted.
  - ACSCER reports must be submitted.
  - NELMs must be conducted for asphalt batch plants.

- **1 year**

Requirements shown in underlined text are for projects located in an Aquatic Resource of Concern (ARC), Outstanding Resource Water (ORW), or Total Maximum Daily Load (TMDL) watershed.
