DEQ TIMELINE

1993 – After a six-month skeleton-crew transition period, DEQ comes into full existence on July 1, with Mark Coleman as the first Executive Director; agency continues to be housed (as the Environmental Health Branch of the Health Department had been) in the OSDH building

1994 – Oklahoma Legislature enacts the Oklahoma Uniform Environmental Permitting Act

1995 – First H2Oklahoma Festival

1995-1996 – DEQ authorized by Legislature to seek and purchase a building for office space, allowing DEQ to move out of overcrowded OSDH building

Randy Ward looks over alr-quality analysis equipment in the air monitoring station at the new state Department of Environmental Quality.

New 'customer-oriented' DEQ to tackle environmental issues

BY MARY HALLEY

A nother summer has arrived, dragging with it the requisite dread of those oppressive hot, humid days made unbearable by a depleted ozone layer. The cone-alert precedent was set last year and will continue to be a summer alongside lemonade and yard sprinklers, until a turnaround in environmental caretaking occurs and regulations are placed upon the offending

Entering the realm of state agencies like a

Entering the realm of state agencies like a charming knight atop a snow white steed, the Department of Environmental Quality opened its doors within the state Health Department at 1000 N.E. 10th on July 1 with two basic objectives — to clean up pollution aiready in existence and to prevent any more from entering the coosystem.

These may seem like lofty, even unrealistic goals, considering bureaucratic suggishness and the reluctance of business and industry to make necessary changes in their production processes. Still, those involved with the fledgling department are optimistic that they can accomplish their mission without putting the state's already slumping economy at further risk.

We hope that businesses and industry will voluntally reduce the amount of chemicals they

voluntarily reduce the amount of chemicals they release into the environment and modify their manufacturing processes to prevent chemical waste," said Michael Dean, director of DEQ information services.

"The initial response has been quite

For the more stubborn companies reluctant to revamp their production processes, the DEQ will find alternate means of inspiring change. "There will be certain tax incentives and

"There will be certain tax incentives and environmental regulations implemented at the state level," Dean said.

The DEQ is staffed by scientists, geologists, hydrologists, chemists, engineers, inspectors, epidemiologists, public educators, attorneys and support personnel.

It will also handle citizen complaints received on the environmental holline at 1-800-522-0206, which has been to also for come time, but which

which has been in place for some time, but which has not been widely publicized. The hotline is answered 24 hours a day by customer-service assistants. Officials at the DEQ investigate the problem and present the customer with a solution within one or two days.

"We are very customer-oriented and plan to

get to the root of every problem," said Dean.

"We are currently going through drills, taking a test complaint and running it through the system to see how long it takes to get an answer."
In addition to dealing with complaints, the DEQ will work to improve air and water quality, manage solid and hazardous waste and educate the public about environmental concerns.

The state Environmental Laboratory will be

the public about environmental concerns.

The state Environmental Laboratory will be responsible for running tests on air and water and providing test services for state agencies and individual citizens. The DEQ has four locations at which it samples air for gong a large

which it samples air for zone alerts.

Local offices and county environmental specialists will allow citizens from all over the state direct access to the DEQ.

"We have developed a new attitude," said

Dean.
"We've got new policies, and we know that if one plan doesn't work, we can implement a different one. The environmentalists now have

Yet according to Earl Hatley, environmental policy consultant for the Oklahoma Toxics Campaign, the environmentalists still have a long way to go. The creation of the DEQ, says Hatley, was actually only a consolidation of various environmental groups working toward the same

This is, however, a bigger first step than I thought we were capable of taking," said Hatley.

We desperately needed a centralized database

"We desperately needed a centralized database in Oklahoma, so in that way the consolidation is a great victory for the state."

The effort to consolidate was fraught with political conflict and was plagued by subagencies that were unwilling to share data, resulting in an unclear picture of environmental problems and what was being done to solve them.

While the formation of the DEQ brings about control of resumal and an improved completic control of the completic con

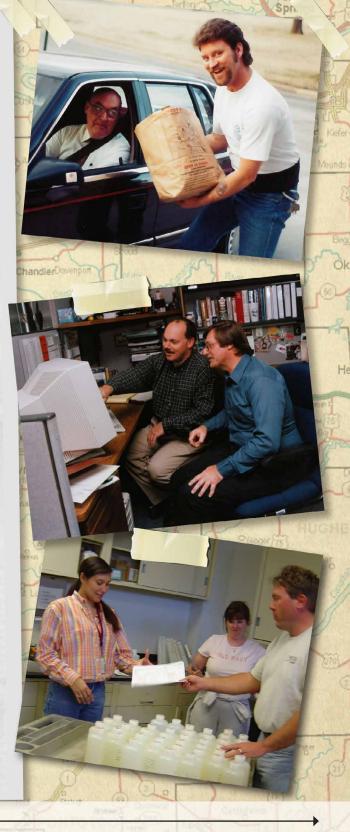

a spirit of renewal and an improved complaint system, Hatley says its board still has a lack of representatives from grassroots environmental groups and an abundance of members from groups and an abundance of members nom industry super-powers such as Conoco and Kerr

"It's like having a fox guard the hen house,

said Hatley.

"Grassroots environmentalists still can't get representation, which essentially puts us back out on the streets."

For more information about the Department of Environmental Quality, call 271-8056.

DEQ TIMELINE

circa (c.) 1996 - New FOCUS process instituted

1996 – Legislature passes the Oklahoma Brownfields Voluntary Development Act.

1996 – EPA delegates NPDES program to DEQ.

1996 – DEQ receives interim approval from EPA for the Air Quality Title V Program.

1996 – Launch of program to certify septic system installers, allowing installers to inspect their own installations

1997 - DEQ receives delegation from EPA of the Storm Water and Pre-Treatment Program

1998 – 31 employees of OCCHD and TCCHD are transferred into DEQ

Letter from the Executive Director

Oklahoma Department of Environmental Quality

Twenty-five years ago, the Oklahoma Department of Environmental Quality (DEQ) began its critical mission of protecting people through the air we breathe, water we drink, and the land on which we live. Fueled by a strong commitment to customer service, sound science, and professionalism, DEQ's scientists, engineers, environmental specialists, hydrologists, investigators, and support staff set forward on a path to focus on both maintaining and improving the state's rich, natural beauty.

Throughout the years, the agency has experienced many noteworthy achievements. When I think about our growth, I think about the customer assistance we have provided to drinking water systems, the professional connections that our field staff has created in communities across the state, the acres of historical contamination we helped clean up, the increase in public awareness about air quality, our ongoing efforts to promote conservation and reuse, and so much more.

Along the way, we have experienced many firsts. We were the first state in the nation to receive authorization to operate the hazardous waste program. More recently, we became the first state to receive Environmental Protection Agency approval for a coal ash permit program. Additionally, we were the first state agency in Oklahoma to meet and exceed the governor's energy reduction goals for state buildings. Our headquarters in Oklahoma City is 100-percent wind power for electricity needs. I also think about the first H2Oklahoma event and the first ScienceFest event, both of which engage elementary school students in learning about science.

None of these achievements would have been possible without our biggest asset, which is our employees. Our continued success can be attributed to our steadfast commitment to providing quality service for Oklahomans. We have gained significant momentum over the past two-and-a-half decades and look forward to continuing for decades to come.

To all DEQ employees, customers, and stakeholders, thank you for your continued support.

Sincerely,

Scott Thompson

DEQ TIMELINE

1998 – DEQ issues its first pesticides-in-fish consumption advisory

1998 – Federal Lead-Based Paint Certification and Accreditation Program delegated to DEQ

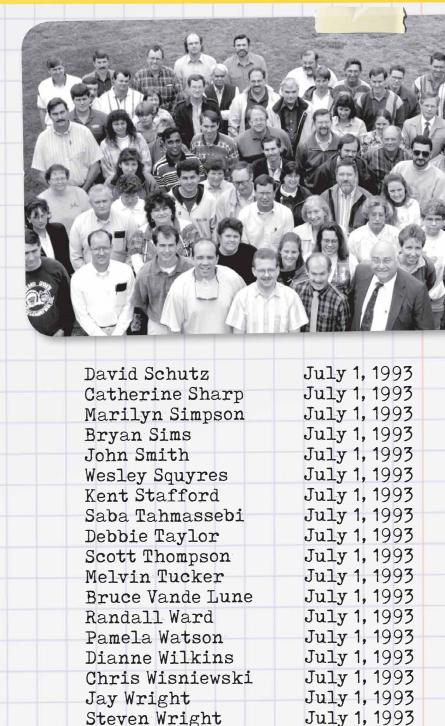

1998 – State Environmental Laboratory receives its first Drinking Water primacy laboratory certificate from EPA

1998 – State Environmental Laboratory begins analytical support for the Beneficial Use Monitoring Program (BUMP)

1998 – AQD begins monitoring PM 2.5

DEQ TIMELINE

2001 – ECLS begins implementing soil profile process instead of percolation tests to design onsite sewage systems

2001 – DEQ receives final approval from EPA for the Air Quality Title V Program

 $2001 - \mathrm{DEQ}$ receives first Brownfields Revolving Loan Fund grant

2002 – DEQ establishes a Green Team to promote environmental awareness and sustainable practices

2002 – DEQ heavily involved in response to western Oklahoma ice storm

2002 – State Environmental Laboratory begins testing drinking water for disinfection byproducts

Board Rulemaking Activities

| - Allenda | OTTOS COL | | Mars 15 | E A LE | ● Bristow |
|----------------------------|-----------|--|---------|-----------|-----------|
| Chapter | Council | Subject | Adopted | Туре | Effective |
| 4 SC 7 | EQB | Created three new sections: 252:4-79 - Aquifer Storage and Recovery application - Tier I; 252: 4-80 - ASR applications - Tier II; and 4-81 - ASR applications - Tier III for ASR applications within Subchapter 7, Part 7. Facilities may apply to DEQ for permits required for an ASR project. | 11-7-17 | Permanent | 9-15-2018 |
| 100 SC 2 and Appendix Q | AQAC | Updated language in Subchapter 2, reflecting the latest date of incorporation of EPA regulations in Appendix Q. Updated OAC 252:100, Appendix Q, incorporating the latest changes to U.S. Environmental Protection Agency (EPA) regulations. | 11-7-17 | Permanent | 9-15-201 |
| 100 SC 7 | AQAC | Revised Part 9 of OAC 252:100-7, Permits for Minor Facilities, by adding a new permit by rule (PBR) for minor facilities whose obligation to obtain an air quality permit is due to the presence or installation of a gasoline dispensing facility with greater than 100,000 gallons of monthly throughput, or gasoline dispensing facility with greater than 100,000 gallons of monthly throughput and an emergency engine. | 11-7-17 | Permanent | 9-15-2018 |
| 100 SC 8 | AQAC | Amended to ensure that facilities subject to OAC 252:100-8-35 are using the most up-to-date guidance available and to keep Oklahoma's air quality rules in line with federal regulations. The Department amended OAC 252:100-8-35, "Air quality impact evaluation," to remove or revise date references to reflect EPA's most current regulations. | 11-7-17 | Permanent | 9-15-201 |
| 205 SCs 3, 13, 15, 17 | HWMAC | Incorporated by reference the federal hazardous waste regulations found in 40 CFR Parts 124 and 260-279 revised as of July 1, 2017. The generator rule revisions required amendments to several subchapters of the 252:205 rules due to federal citation changes. In some cases language was added or deleted to the state rules to ensure equivalency with the federal rules. In addition, this rulemaking revoked the applicable parts of subchapter 17, which are no longer supported by statute since 27A O.S. § 2-11-303 was revoked by the Oklahoma Legislature in 2013. | 11-7-17 | Permanent | 9-15-201 |
| 515 SCs 3, 21, 27 | SWMAC | Amended OAC 252:515 in response to legislative changes regarding tires that fall under the scope of the Used Tire Recycling Program. Also corrected citations and clarified language throughout Chapter 515. | 2-16-18 | Permanent | 9-15-201 |

DEQ TIMELINE

2002 - First ScienceFest

2002 – Mark Coleman retires and Steve Thompson appointed as second DEQ Executive Director

2002 – Certification for on-site sewage installers becomes mandatory

2003 – Oklahoma/Arkansas Statement of Joint Principles and Actions regarding controlling phosphorus in the Scenic Rivers watersheds 2003 – AQD begins air toxics sampling

2003 – DEQ heavily involved in response to May 8th Moore tornado

Springs

Sapulpa

2004 – DEQ establishes Central Records Section

| | Chapter | Council | Subject | Adopted | Туре | Effective |
|--|--|---------|--|---------|-----------|-----------|
| | 517 SCs 1, 9, 11, 13, 15, 17, 19 | SWMAC | Amended 252:517 to remove invalid or nonexistent citations to ensure the Disposal of Coal Combustion Residuals from Electric Utilities rules are consistent with the Oklahoma Administrative Rules (OAR) formatting requirements and to clarify the program's compliance with federal regulations; corrected typos and made other non-substantive administrative changes. | 2-16-18 | Permanent | 9-15-2018 |
| | 626 SC 1 | WQMAC | Amended the definition for "Public Water Supply (PWS) System" to exclude certain purchase water systems that meet explicit requirements; and amended the definition for "Validated dose" in order to correct a typographical error. | 11-7-17 | Permanent | 9-15-2018 |
| The same of the sa | 628 SCs 1, 3, 5, 7, 9, 11 App. A | WQMAC | Created a new Chapter, OAC 252:628 Indirect Potable Reuse for Surface Water Augmentation (IPR). This rule describes how DEQ will regulate new discharges of treated municipal wastewater to existing Public Water Supply (PWS) surface waterbodies for the purpose of augmenting the existing volume of water available for PWS purposes. These rules will guide DEQ in the issuance of discharge and construction permits to those who wish to undertake an IPR project. The rules establish effluent water quality benchmarks and permit implementation procedures, treatment standards for IPR treatment plants, operation and maintenance standards, operator certification standards, and IPR receiving waterbody monitoring requirements. In addition, the Chapter establishes fees associated with IPR permitting and operations. | 2-16-18 | Permanent | 9-15-2018 |
| | 631 SCs 1, 3 | WQMAC | (1) Amended the definition for "Public Water Supply (PWS) System" to exclude certain purchase water systems that meet explicit requirements; (2) Updated the rule concerning the date of the incorporation by reference of certain federal regulations from July 1, 2015, to January 1, 2017. This specifically allows for newly approved alternative testing methods for contaminants listed at 40 CFR 141.21(f)(3) found in Appendix A to Subpart C of Part 141; (3) Clarified the reporting requirements of 40 CFR 141; and (4) modified language to include a process control test to stabilize calcium carbonate for groundwater systems. | 11-7-17 | Permanent | 9-15-2018 |
| | 653 SC's 1, 3, 5, 7, 9, 11 | WQMAC | Created a new Chapter, OAC 252:653 Aquifer Storage and Recovery, to create a regulatory structure for an aquifer storage and recovery (ASR) program. This Chapter enables DEQ to issue permits to those who wish to undertake an ASR project. The Chapter establishes a multi-phase permitting process and requirements for the construction and operation of an ASR project. The Chapter requires appropriate testing and modeling to ensure a project is feasible and that the aquifer is not harmed. | 11-7-17 | Permanent | 9-15-2018 |

The Air Quality Advisory Council (AQAC) is authorized by the Oklahoma Clean Air Act to review air quality issues and hold public hearings as part of the state's rulemaking process. Once approved by the nine-member panel, proposed rules are recommended to EQB. Upon EQB adoption, the rules proceed to the state Legislature and Governor for final approval and adoption.

AQAC members are appointed by the Governor for seven-year terms and represent a range of related professions as set forth in the Oklahoma Statutes. This year the council voted to re-elect Laura Lodes, representing the engineering profession, as Chair, and Gary Collins, representing the agriculture industry, as Vice Chair for the 2018 calendar year. Upon the resignation of David Gamble, Gregory Elliott was appointed by the Governor to represent the petroleum industry.

Two meetings were held during FY 2018. At the October 2017 meeting in Oklahoma City, AQAC recommended for adoption the annual update of Appendix Q, Incorporation By Reference (IBR), to incorporate the latest modifications to federal regulations, and updating language in Subchapter 2, IBR, to reflect the latest date of incorporation of Environmental Protection Agency (EPA) regulations

in Appendix Q. The appendix is updated annually to incorporate federal regulations relating primarily to New Source Performance Standards (NSPS) and National Emission Standards for Hazardous Air Pollutants (NESHAP) that will be enforced by the state.

Also at the October meeting, AQAC recommended for adoption changes to OAC 252:100, Subchapter 7, Permits for Minor Facilities, to simplify the permitting process and reduce the regulatory burden for owners and operators of gasoline dispensing facilities or gasoline dispensing facilities with emergency engines. AQAC also recommended adoption of changes to Subchapter 8, Permits for Part 70 Sources and Major New Source Review (NSR) Sources to remove or revise certain date references to reflect EPA's most current regulation in order to ensure that industry follows the most up-to-date EPA regulations available.

The second FY18 meeting was held in June 2018 in Owasso. Rules to update regulations applicable to aerospace coating facilities were considered at that meeting and were held over to the October 2018 meeting. No rules were recommended to the EQB from this meeting.

DEQ TIMELINE

2006 – DEQ begins cleanups of Oklahoma armories under the Site Cleanup Assistance Program (SCAP)

2006 – AQD begins monitoring for mercury

2006-2007 – DEQ pilot studies on flexible work week for employees

2007 – DEQ heavily involved in response to January ice storm

2007 – DEQ assists with response to discovery of chemical weapons test kits at Great Salt Plains National Wildlife Refuge

The Hazardous Waste Management Advisory Council met on October 12th, 2017 in Oklahoma City. The purpose of the meeting was to change the IBR date to 2017 to ensure equivalency with the federal program. Specific rule changes that were incorporated included the Generator Improvement Rules.

Changes to these rules necessitated corresponding changes to the state rules to ensure that citations were correct; therefore, several subchapters in the state rules had to have minor revisions to ensure equivalency. The other rulemaking activity was to revoke applicable parts of subchapter 17 in the state rules which had become obsolete after a statutory change in 2013. Finally, a budget presentation was made and the meeting was adjourned.

DEQ TIMELINE

The

The Solid Waste Management Advisory Council (SWMAC) serves as the initial rulemaking body for the Land Protection Division and operates under authority of the Oklahoma Solid Waste Management Act. The SWMAC holds public hearings, reviews solid waste issues, and provides expertise about various solid waste issues. All solid waste rules and regulations must first be reviewed and approved by the SWMAC before being recommended to EQB. Once approved by EQB, the rules proceed to the Legislature and the Governor for final approval. The SWMAC is composed of ten members who represent specific areas of expertise as described by 27A O.S. § 2-2-201(E), in the Oklahoma Environmental Quality Code.

Two regular meetings of SWMAC were convened during the fiscal year. Amendments were made to Oklahoma Administrative Code (OAC) 252:515, Management of Solid Waste, in response to legislative changes regarding tires that fall under the scope of the Used Tire Recycling Program. OAC 252:515 was also amended to remove outdated references and incorrect citations and to clarify language. Revisions to OAC 252:517 Rules for Disposal of Coal Combustion Residuals from Electric Utilities were also accomplished. Changes included revisions to clarify compliance with federal regulations and other non-substantive administrative changes.

** Vice Chair

DEQ TIMELINE

2008 – DEQ heavily involved in follow-up to E coli illness outbreak associated with a restaurant in Locust Grove

2009 – DEQ assists other agencies in sampling and other follow-up related to an illness outbreak among athletes that participated in a triathlon that included swimming in the Oklahoma River

* Chair

2009 – DEQ begins residential mercury recovery program

2009 – DEQ moves to 100% wind power for its electricity needs

| | Shawn Heldebrandt | Medical Industry | Speaker of the House | 6/30/2021 |

The major event of FY 18 for the Radiation Management Advisory Council (RMAC) was the retirement of Council Chair Steve Woods. Mr. Woods, a registered Professional Engineer, worked for Halliburton as Global Radiation Safety Officer for many years and was a member of RMAC since its inception in 1993. Mr. Woods served as Vice-Chair for several years and as Chair of the Council for more than ten years. Mr. Woods has provided great service to RMAC and the people of Oklahoma for many years. DEQ appreciates his tireless efforts and hopes he catches many fish in his retirement.

DEQ TIMELINE

The

Village

2010 – DEQ issues first mercury-in-fish consumption advisory

2010 – Dale McHard retires from DEQ after 52 years of state service

2010 – State Environmental Laboratory completes analysis of its 1,000,000th sample

2010 – Oklahoma submits its regional haze state implementation plan to EPA

2011 – DEQ initiates day-forward imaging plan

2011 – Customer Services Division becomes State Environmental Laboratory Services Division to better focus on laboratory services and accreditation functions; some programs moved to other Divisions

Spring

Sapulpa

* Chair **Vice Chair

The Water Quality Management Advisory Council (WQMAC) is made up of twelve members appointed for three-year terms who represent a wide variety of interested parties. Four members are appointed each by the Governor, the Speaker of the House, and the President Pro Tempore of the Senate. WQMAC typically meets four times a year; however, additional meetings are sometimes scheduled in order to address a rule change that does not fit the regular meeting schedule.

WQMAC reviews and recommends rules governing water quality to EQB. Currently, 23 chapters of rules are under the authority of WQMAC. These include regulations for laboratory accreditations, laboratory services,

industrial and municipal wastewater, general water quality, wastewater lagoon and land application systems, pretreatment, minor public water supply, public water supply, water and wastewater construction standards, biosolids, water reuse, drinking water state revolving fund, small public and private sewage systems, septage pumpers and transporters, underground injection control, implementation of water quality standards, and waterworks and wastewater works operator certification.

During FY 2018, WQMAC passed rule changes to Chapters 4, 626, and 631. Two new rule chapters, Chapter 628, Indirect Potable Reuse for Surface Water Augmentation, and Chapter 653, Aquifer Storage and Recovery were also passed.

DEQ TIMELINE

2011 – First of Oklahoma's major blue-green algae blooms (Grand Lake)

2011 – State Environmental Laboratory initiates harmful algal bloom (HAB) testing

2011 - First Red River Fish kill

c. 2011 – DEQ 101 meetings held around the state, to provide critical regulatory information to stakeholders

2012 – DEQ IT assets and personnel transferred to Office of Management and Enterprise Services (OMES)

2012 – New state regulations are promulgated for construction and operation of water reuse facilities

Employees of the Quarter

DEQ TIMELINE

2015 – Creation of the Water Loss Audit Program to assist water systems in determining areas of water loss and revenue loss

2015 – Air quality monitoring bench established at the Children's Garden at OKC's Myriad Botanical Gardens

2016 – DEQ/Severn Trent settlement for \$955K

2016 – Oklahoma Department of Commerce estimates DEQ's Brownfields Program has resulted in 147% growth in jobs on Brownfields properties and retail sales have increased by 4300% on those properties

Environmental Quality Report

Sapulpa

For consideration and approval by the Environmental Quality Board on November 7, 2017

DEQ is required by statute to annually submit an "Environmental Quality Report" to the Governor, the President Pro Tempore of the Senate, and the Speaker of the House of Representatives. It is to summarize DEQ's annual budget needs for providing the environmental services within its jurisdictional areas, new federal mandates, and state statutory or constitutional changes recommended by DEQ. The report must be reviewed and approved by the Environmental Quality Board prior to its submittal to the Governor and legislative leaders.

I. ANNUAL BUDGET REQUEST

DEQ is slated to receive \$5,695,766 in state appropriated funding for FY 2018. This represents a reduction of 4.87 percent from the FY 2017 appropriation of \$5,987,388 and is almost \$3.4 million less than DEQ received as recently as FY 2014.

The level of cuts in recent years strongly warrants a request for an increase in state appropriations for SFY 2019. DEQ, with the approval of the Environmental Quality Board, is requesting a general revenue appropriation of \$6,322,635 for FY 2019. The specifics of this request are contained in Appendix A to this report.

DEQ's total budget for FY 2019 – including fee revenues and federal funds – is indeterminate as of the date of submittal of this report. This is due to some variability in fee income, but especially because of uncertainty over state appropriated funding during a period of state economic struggles and the current unpredictability over the level of federal grant funding that will be available to the states. The total DEQ budget for current FY 2018 is roughly \$84,000,000, comprised of approximately 7 percent state general revenue funding, 26 percent federal funding, 11 percent federal funding for the Office of the Secretary of Energy and Environment, and 56 percent fee funding. Appendix B contains additional details. Should state or federal funding substantially decrease, DEQ would have to further reduce activities and/or secure additional fee funding.

DEQ TIMELINE

2018 – Unveiling of new DEQ specialty license plates

2018 – DEQ receives delegation for CCR program

2018 and beyond – More DEQ milestones to come

II. FEDERAL MANDATES

AIR QUALITY DIVISION (AQD)

Clean Power Plan

In 2014, President Obama directed EPA to issue carbon standards for new and existing power plants. In 2015, EPA finalized the Clean Power Plan (CPP), which was designed to reduce greenhouse gas emissions from existing sources, and finalized requirements for new sources. Under the CPP rule as issued, implementation plans from each state would have been due to EPA by no later than September 2018.

Numerous industry groups challenged the CPP's legality in the D.C. Circuit Court of Appeals. In February of 2016, the U.S. Supreme Court issued an order to stay implementation of the CPP pending judicial review. The stay remains in effect. Oral arguments before the D.C. Circuit en banc were held on September 27, 2016, but no decision has been issued.

In October 2017, EPA announced that it was proposing to repeal the Clean Power Plan regulations. It is uncertain whether any alternative will be proposed.

Volkswagen Mitigation Trust

In 2016, EPA filed a complaint against Volkswagen alleging violations of the Clean Air Act. Actions taken by Volkswagen had caused NOx emissions from certain of their vehicles to be much lower during laboratory emissions testing than during normal operations. As part of the settlement with EPA, Volkswagen was required to establish a \$2.7 billion mitigation trust fund. The mitigation trust fund will pay for defined eligible projects that reduce NOx. Oklahoma's portion of this fund will be approximately \$20.9 million. DEQ is expected to be named trust beneficiary and will work with the Secretary of Energy and Environment and the Governor's office to ensure the money is spent in accordance with trust requirements. Work is underway to develop the mitigation plan to be submitted to the trust for approval, after public comment.

Ozone National Ambient Air Quality Standard

In 2015, EPA lowered the National Ambient Air Quality Standard (NAAQS) for ozone from 75 ppb to 70 ppb.

Based on DEQ's analysis of the data from 2014-2016, Governor Fallin submitted a letter to EPA recommending that Oklahoma in its entirety be designated attainment/unclassifiable. The statutory deadline for designations by EPA was October 1, 2017, but EPA has not yet issued them. The EPA administrator may determine that an extension of time to complete designations is necessary. Due to Oklahoma's continued compliance with the 2015 standard, including the period 2015-2017, it is in Oklahoma's best interest for designations to move forward.

To reduce the potential for nonattainment in the future, AQD will continue to work closely with the Councils of Governments (COGs) across the state, and especially the Indian Nations Council of Governments (INCOG) and the Association of Central Oklahoma Governments (ACOG), on educational efforts and continued implementation of voluntary "Ozone Advance" plans.

FOLISCE OF

Sulfur Dioxide National Ambient Air Quality Standard

In 2010, EPA strengthened the health-based NAAQS for sulfur dioxide (SO₂) by establishing a new one-hour standard of 75 parts per billion (ppb). In 2015, EPA issued additional guidance and schedules implementing this change. This guidance required an analysis of various SO₂ emission units across the state using a combination of modeling and monitoring to determine compliance with the standard. AQD staff have spent a considerable amount of time modeling a number of sources and working with them to evaluate their compliance status and determine whether monitoring would be necessary. This analysis led to the establishment of two new monitoring sites (near Kremlin, specifically for the Oxbow Calcining facility, and in the Pryor MidAmerica Industrial Park) and the relocation of one monitor (in the Muskogee area). Monitors across the state continue to monitor compliance with the SO₂ standard.

LAND PROTECTION DIVISION (LPD)

SOLID WASTE

Coal Combustion Residuals (CCR)

State rules for management of CCR became effective June 9, 2016 as Oklahoma Administrative Code (OAC) 252:517 Disposal of Coal Combustion Residuals from Electric Utilities. Passage of the Water Infrastructure Improvements for the Nation (WIIN) Act in late 2016 included provisions that required states to apply to EPA for CCR permit program approval and operate under EPA oversight. Oklahoma applied and was the first state to receive program approval, effective July 30, 2018.

EPA revised provisions of the CCR rule, Part 257, and plans additional revisions in the fall of 2018 and early 2019. Additionally, the D.C. Appellate Court rendered a decision vacating portions of Part 257 and remanding other portions back to EPA. Changes to the Federal regulations (both accomplished and anticipated) made some provisions of OAC 252:517 more stringent – and more importantly, some less – than its Federal counterpart. Revisions will need to be made to Chapter 517 in order that it may remain at least as stringent as the Federal Part 257 rule and compliant with EPA program approval. Revising Chapter 517 will be difficult as revisions of Part 257 are occurring rapidly and EPA does not yet know how vacated and remanded portions of the rule will be rewritten.

CLEANUP PROGRAMS

Vapor Intrusion

The final rulemaking to add a subsurface intrusion component to the Superfund Hazard Ranking System became effective on May 22, 2017. The extent to which this will impact the DEQ Superfund program is uncertain, pending further training, guidance, and revision of the "Quickscore" program, but DEQ can now test for and evaluate subsurface intrusion if DEQ determines it is necessary during Preliminary Assessment/Site Inspection projects.

Walters

WATER QUALITY DIVISION (WQD) and STATE ENVIRONMENTAL LABORATORY SERVICES DIVISION (SELS)

SAFE DRINKING WATER ACT

Lead in Drinking Water

The federal Reduction of Lead in Drinking Water Act became effective in 2014. Drinking water systems have been confused by the self-implementing federal law. EPA is preparing rulemaking to clarify the requirements. As a result of the issues raised in the Flint, Michigan, case, this rule is a priority for EPA. The comment period closed in May 2017, and it is expected the rule will be finalized at a relatively rapid pace. DEQ expects to receive more questions and requests for sampling once the rule is finalized. The costs to DEQ are uncertain at this time. Theoretically, there should be no new costs to drinking water systems since the federal law is already effective. However, DEQ has already been working closely with some systems that have installed non-compliant piping, valves, and meters.

Lead and Copper Rule Long-Term Revision

EPA has informed states that it intends to publish the Lead and Copper Rule Long-Term Revision during 2018. This rule is expected to require additional monitoring, reporting, and public education for public water supply systems and to separate the required monitoring for lead and copper. Every water system will be required to submit new monitoring plans. There will be increased corrosion control treatment requirements and a push for complete replacement of lead service lines. Line replacement could mean significant costs to water systems, depending upon the amount of line

replacement necessary. WQD will see increased costs associated with conducting public outreach, reviewing the required monitoring plans, making compliance determinations, and meeting an increased need by public water supply systems for technical assistance. Especially because of the separate monitoring for lead and copper, SELS workloads for laboratory customer assistance, sample management and analysis will increase.

Infrastructure Financing

Both the authorizing legislation for the Drinking Water State Revolving Fund and the Water Infrastructure Improvements for the Nation (WIIN) Act include funding for water infrastructure upgrades. Lead reduction is a high priority for the drinking water systems. If additional infrastructure funding is appropriated, there will be an increase in workload on the WQD staff to complete the technical work required prior to the Oklahoma Water Resources Board making the loans or grants. Additionally, there will be increases in construction inspections and payment processing. DEQ must maintain adequate staffing in these programs to ensure that the infrastructure funding is awarded to the publicly owned water or wastewater systems in a timely manner to assist them in protecting public health.

CLEAN WATER ACT

Waters of the United States (Clean Water) Rule

Purce

On July 27, 2017, EPA and United States Army Corps of Engineers (USACE) published notice that the agencies plan on an interim basis to return to the previous regulatory definition of Waters of the United States. The Obama-era Waters of the United States rule has been judicially stayed and EPA and USACE are working to propose a replacement. At this point it is unknown what the new proposed rule will include and what the implications might be for DEQ.

Walters

National Pollutant Discharge Elimination System (NPDES) Program Update Rule

The proposed NPDES Program Update Rule would provide updates to the NPDES program related to state implementation and decision-making. The initial proposal, published in May 2016, included additional data requirements for permit applications; additional documentation for water-quality-based permit limits; revised requirements regarding public notice and retention of electronic documents; and a provision allowing EPA to consider administratively continued permits to be draft permits. Such administrative continuance would start the timeframe that DEQ would have to update a permit to EPA's satisfaction, or EPA could begin the process to "federalize" the permit. This provision would significantly increase DEQ's workload and put the regulated community at risk for federalized permits.

After the initial publication in 2016, EPA received over 14,000 comments. Most centered on the administratively continued permit issue. EPA has indicated that there will be a revised proposed rule published in late 2017, with a goal of finalizing the rule during calendar year 2018.

Method Update Rule for the Analysis of Effluent

EPA's revised Method Update Rule for the Analysis of Effluent became effective September 27, 2017. It modifies the procedures approved for sampling and testing. The procedure for the determination of the Method Detection Limit (MDL) is also amended, which may be problematic for some labs and may require the implementation of new technology or methodology. The change affects all accredited and lab-operator certified laboratories performing compliance testing required by the Oklahoma Pollutant Discharge Elimination System or National Pollutant Discharge Elimination System. Some Safe Drinking Water Act testing also will be subject to this new procedure. The cost to the SELS, WQD, and the affected laboratories for training, implementation, and accreditation will be significant.

III. LEGISLATIVE RECOMMENDATIONS

The following is proposed as a DEQ "request" bill for the 2018 Oklahoma regular legislative session.

AUTHORIZATION FOR BOND FINANCING

DEQ's employee parking garage for its Oklahoma City headquarters building requires major repairs. DEQ has received permission from the state Long-Range Capital Planning Commission to proceed on the parking garage renovation project, utilizing bond financing. The agency must obtain legislative authorization to proceed with bond financing for the project.

Proposed Operations Funding Changes For the Fiscal Year Ending 06/30/2019

| On-Going Requests | FY 2018 Appropriation | FY 2019 Requested Increase | FY 2019 Total Appropriation Request |
|---|--------------------------|----------------------------------|---|
| State Environmental Laboratory Services | \$1,694,379 | \$274,888 | \$1,969,267 |
| Environmental Complaints and Local Services | \$2,615,607 | \$201,981 | \$2,817,588 |
| Water Quality Division | \$1,385,780 | \$0 | \$1,385,780 |
| Subtotal On-Going Requests | \$5,695,766 | \$476,869 | \$6,172,635 |
| One-Time Requests | | | |
| Air Quality Division | | \$150,000 | \$150,000 |
| Total Requests | \$5,695,766 | \$626,869 | \$6,322,635 |

SELS – Public Water Supply and Laboratory Customer Support

\$91,629

This request allows the SELS to fund 1 position. This position would primarily provide compliance assistance to public water supplies that use SELS for sample analysis. Assistance would be in the form of scheduling, provision of supplies, and technical assistance that PWSs, especially small systems, need to remain in compliance with federal and state drinking water rules. This position would also provide direct sampling assistance and field analysis to systems for required testing that is more technical in nature to support the Safe Drinking Water Act. This position would also provide technical and sampling assistance to wastewater systems, private citizens, environmental emergencies, complex complaint investigations, and the Mercury in Fish program. Funding this position will allow SEL to maintain services at the level currently provided as demand for services increases due to increased monitoring requirements and workload.

SELS – Public Water Supply and Organics Analysis Group

\$183,259

The enforcement of Phase II/V National Primary Drinking Water Regulation by the Water Quality Division will significantly increase the workload of the State Environmental Laboratory Services Division, particularly with regards to testing for Synthetic Organic Compounds (SOC). The SOC workload for PWSs will dramatically increase to a volume unprecedented for the last 25 years. The increased workload is expected to place critical strain on the Organics Analysis Group's ability to accomplish its work. When coupled with its current workload of PWS, Superfund, Emergency Response and Complaint testing, which is not expected to decline, it may be impossible to accomplish this testing at the current staffing level. The increase in SOC testing is expected to begin January 1, 2018. Training for analytical procedures takes approximately one year for a new scientist to become proficient in SOC testing. We urge you to consider the addition of two (2) positions to the SELSD Organics Analysis Group.

Environmental Complaints and Local Services

\$201,981

This request allows ECLS to fund three of the five positions that have been eliminated since FY2017. Filling these positions will bring the ECLS staff to the number of positions required by the staffing model. Due to the loss of five positions, we reduced the number of ECLS local offices and were forced to reduce the number of facility inspections from quarterly to annual inspections. These inspections include Public Water Supplies, Wastewater Treatment Plants, and Solid Waste Facilities. We have also reduced oversight of the Onsite Septic System Program. Even with the aforementioned reductions in workload the staffing model shows that we are still down by three full-time employees. Funding these three positions would allow us to be more responsive to technical assistance and complaint requests from citizens, enable us to process permit applications in a more prompt manner, better assist small communities with drinking water, wastewater and solid waste problems, and more effectively respond to natural disasters (drought, tornadoes, earthquakes, floods, power outages, etc.) and manmade disasters (hazardous waste spills, water supply contamination, etc.).

Air Quality Division

\$150,000

The Oklahoma Department of Environmental Quality, Air Quality Division uses a web based system called Redbud to collect emission inventory information from regulated entities. Redbud was built in house over ten years ago and has had some modifications to improve data quality as it is collected; however, this system needs major upgrades to the application platform to keep up with technology. The emissions inventory reporting season typically runs the first quarter of every calendar year and has periods of extremely heavy traffic. During heavy use of the system, customers and staff experience frequent deadlocks in the system that cause delays in reporting data. Air Quality believes the continued use of Redbud in its current platform will be burdensome to customers and staff. For Air Quality to continue to meet its responsibilities of collecting emission inventory information and reporting the data to the US EPA, our current system, Redbud, must have a total upgrade or we must obtain a replacement. There are off-the-shelf reporting platforms that have been built in recent years that are scaled to perform under heavy traffic and provide regulated entities more flexibility to enter and update their data and regulators faster reporting to EPA. Air Quality believes it would be more financially responsible in the long term to replace rather than upgrade Redbud. The Air Quality Division is requesting \$150,000 either upgrade Redbud or to acquire an off-the-shelf replacement and have it customized to meet our needs.

Hazardous Waste Fund Report

Kendnck

Chandler Davienpor

DEQ's Hazardous Waste Fund is authorized by the Hazardous Waste Fund Act, 27A O.S. § 2-7-301 et seq. There was \$50,931 in income to the Hazardous Waste Fund in FY 18, derived from administrative penalties associated with violations of the Oklahoma Hazardous Waste Management Act, 27A O.S. § 2-7-101 et seq. According to Section 2-7-304 of the Hazardous Waste Fund Act, monies in the Hazardous Waste Fund may be used for protection of public health and safety, basic emergency response training and protective equipment, environmental response and remediation, and assistance to local governments with development of emergency response plans. In FY 2018, DEQ used these funds to provide mercury collection and disposal services for 27 Oklahoma households and provided 19 counties with basic emergency response equipment.
