LEAD TESTING
In Schools & Child Care Facilities Drinking Water Program

Approximate Location of City of Participating Facilities.

CITIES OR TOWNS WITH MULTIPLE PARTICIPANTS ARE SHOWN ONCE.

PROGRAM REPORT

-- This report will be updated quarterly with new program totals --

PROGRAM PARTICIPANTS:

Public Schools- 45
Childcare, Daycare- 2
Other Youth Facilities- 1
Private Schools or Childcare- 0

TOTAL PARTICIPANTS

48

NOTABLES:

- Two schools replaced water fountains using SCAP funding and re-sampled the outlets.

For more information about the program, please visit our LWSC program website:

LWSC Program Website

LEAD TESTING Report Date Range: 1/1/22 – 3/31/22
Participation Population

Students and Staff in participating facilities: 23,440

Students and Staff in facilities who have remediated/reduced lead in their facility: 4,225

Facility Remediations

When lead is detected in any amount, the facility takes action to reduce the lead delivered in potable sources by any one or combination of the following.

- Replaced faucet/fixture: 21
- Replaced water cooler: 13
- Added approved filter: 0
- Plumbing repairs: 0
- Restricted use or Removed from service: 17
- Flushing protocols, routine: 4
- Enhanced maintenance: 0

---

Facility Remediations Program provided by DEQ Land Protection Division to provide funding for remediation. i.e. faucet replacement, added approved filters, water cooler replacement, etc.

When lead is detected in any amount, the facility takes action to reduce the lead delivered in potable sources by any one or combination of the following.

Sample Result Summary To Date

- Not detected, < 1 ppb: 69.9%
- Lead detected, 1-15 ppb: 26.8%
- Lead exceedance, > 15 ppb: 3.3%

Kayleigh Clement, Environmental Sample Specialist for the State Environmental Laboratory, analyzes turbidity for samples from a recent collection at a school. Turbidity must be analyzed first to determine if sample digestion is needed before the instrument analysis of lead. Of the participating schools to date, a single school can have anywhere from 20 to 252 samples to test at once.
Did You Know

How Lead Gets Into Drinking Water

Lead can enter drinking water when plumbing materials that contain lead corrode, especially where the water has high acidity or low mineral content that corrodes pipes and fixtures. The most common sources of lead in drinking water are lead pipes, faucets, and fixtures. Lead pipes are more likely to be found in buildings built before 1986. Among structures without lead service lines, the most common problem is brass or chrome-plated brass faucets and plumbing with lead solder.

Facility Postings

Public Schools - 21
Childcare Facilities - 2
Other Youth Facilities - 1
Private School/Childcare - 0
