Appendix H. Beneficial Use Designations for Certain Limited Areas of Groundwater [NEW]
Appendix I. Criteria for Groundwater Protection [NEW]

SUBCHAPTER 1. GENERAL PROVISIONS

252:730-1-1. Purpose

- (a) The Oklahoma Department of Environmental Quality's statutory authority and responsibility concerning establishment of standards of quality of waters of the state are provided for under 82 O.S., §1085.30. Under this statute the Oklahoma Department of Environmental Quality is authorized to promulgate rules "which establish classifications of uses of waters of the state, criteria to maintain and protect such classifications, and other standards or policies pertaining to the quality of such waters." [82 O.S. § 1085.30(A)]. These Standards are designed to maintain and protect the quality of the waters of the state.
- (b) The purpose of the Standards is to promote and protect as many beneficial uses as are attainable and to assure that degradation of existing quality of waters of the State does not occur.

252:730-1-2. Definitions

The following words and terms, when used in this Chapter, shall have the following meaning unless the context clearly indicates otherwise:

"Abatement" means reduction of the degree or intensity of pollution.

"Acute test failure" means greater than or equal to 50% mortality to appropriate test species at or below the critical effluent dilution after a 48 hour test as provided in OAC 252:690-3-29.

"Acute toxicity" means greater than or equal to 50% lethality to appropriate test organisms in a test sample.

"Alpha particle" means a positively charged particle emitted by certain radioactive materials. It is the least penetrating of the three common types of radiation (alpha, beta and gamma) and usually is not dangerous to plants, animals or humans.

"Ambient" means surrounding, especially of or pertaining to the environment about an entity, but undisturbed and unaffected by it.

"Aquifer" means a formation that contains sufficient saturated, permeable material to yield significant quantities of water to wells and springs. This implies an ability to store and transmit water; unconsolidated sands and gravels are typical examples.

"Aquifer Storage and Recovery Activities" or ("ASR") means activities that exclusively include activities for the storage of water in and recovery of water from an aquifer pursuant to a site-specific aquifer storage and recovery plan authorized by 82 O.S. § 1020.2A. Activities not conducted pursuant to a site-specific aquifer storage and recovery plan shall not be considered ASR activities. For purposes of this chapter, ASR activities also shall not include groundwater recharge or augmentation through a natural connection with a farm pond or other impoundment otherwise authorized by law.

"Artificial Aquifer Recharge" means activities with the primary purpose of recharging or augmenting an aquifer with no intention of recovering such water for future use. For purposes of this chapter, Artificial Aquifer Recharge activities shall not include activities specifically

authorized pursuant to 82 O.S. § 1020.2(G) or stormwater runoff management practices otherwise authorized by law.

"Assimilative capacity" means the amount of pollution a waterbody can receive and still maintain the water quality standards designated for that waterbody.

"Attainable uses" means the best uses achievable for a particular waterbody given water of adequate quality. The process of use attainability analysis can, and in certain cases must, be used to determine attainable uses for a waterbody.

"Background" means the ambient condition upstream or upgradient from a facility, practice or activity which has not been affected by that facility, practice or activity.

"BCF" means bioconcentration factor.

"Beneficial uses" means a classification of the waters of the State, according to their best uses in the interest of the public.

"Benthic macroinvertebrates" means invertebrate animals that are large enough to be seen by the unaided eye, can be retained by a U. S. Standard No. 30 sieve, and live at least part of their life cycles within or upon available substrate in a body of water or water transport system.

"Best Available Technology" means the best proven technology, treatment techniques or other economically viable means which are commercially available.

"Best management practices" means schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the pollution of waters of the state or United States. BMPs also include treatment requirements, operating procedures, and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage.

"Beta particle" means a negatively charged elementary particle emitted by radioactive decay that may cause skin burns. It is easily stopped by a thin sheet of metal.

"Bioconcentration factor" means the relative measure of the ability of a contaminant to be stored in tissues and thus to accumulate through the food chain and is shown as the following formula: $BCF = \text{Tissue Concentration} \div \text{Water Concentration}$.

"BMPs" means best management practices.

"Board" means the Environmental Quality Board

"BOD" means biochemical oxygen demand.

"Carcinogenic" means cancer producing.

"Chronic test failure" means the statistically significant difference (at the 95% confidence level) between survival, reproduction or growth of the test organism at or below the chronic critical dilution after completion of a 7 day test as provided in OAC 252:690-3-29, or other test as approved by the permitting authority and the EPA Regional Administrator, and a control.

"Chronic toxicity" means a statistically significant difference (at the 95% confidence level) between longer-term survival and/or reproduction or growth of the appropriate test organisms in a test sample and a control. Teratogenicity and mutagenicity are considered to be effects of chronic toxicity.

"Coliform group organisms" means all of the aerobic and facultative anaerobic gram-negative, non-spore-forming rod shaped bacteria that ferment lactose broth with gas formation within 48 hours at 35°C.

"Color" means true color as well as apparent color. True color is the color of the water from which turbidity has been removed. Apparent color includes not only the color due to substances in solution (true color), but also that color due to suspended matter.

"Conservative element" means a substance which persists in the environment, having characteristics which are resistant to ordinary biological or chemical degradation or volatilization.

"**Conservation plan**" means, but is not limited to, a written plan which lists activities, management practices and maintenance or operating procedures designed to promote natural resource conservation and is intended for the prevention and reduction of pollution of waters of the state.

"**Critical dilution**" means, for chronic whole effluent toxicity testing, an effluent dilution expressed as a percentage representative of the dilution afforded a wastewater discharge according to the appropriate Q*-dependent chronic mixing zone equation.

"**Critical temperature**" means the higher of the seven-day maximum temperature likely to occur with a 50% probability each year, or 29.4°C (85°F).

"**Criterion**" means a number or narrative statement assigned to protect a designated beneficial use.

"**CWAC**" means Cool Water Aquatic Community.

"**Degradation**" means any condition caused by the activities of humans which result in the prolonged impairment of any constituent of the aquatic environment.

"**DEQ**" means the Oklahoma Department of Environmental Quality.

"**Designated beneficial uses**" means those uses specified for each waterbody or segment whether or not they are being attained.

"**Dissolved oxygen**" means the amount of oxygen dissolved in water at any given time, depending upon the water temperature, the partial pressure of oxygen in the atmosphere in contact with the water, the concentration of dissolved organic substances in the water, and the physical aeration of the water.

"**DO**" means dissolved oxygen.

"**DRASTIC**" means that standardized system developed by the United States Environmental Protection Agency for evaluating groundwater vulnerability to pollution, based upon consideration of depth to water (D), net recharge (R), aquifer media (A), soil media (S), topography (T), impact of the vadose zone media (I), and hydraulic conductivity (C) of the aquifer.

"**EPA**" means the United States Environmental Protection Agency.

"**Ephemeral stream**" means an entire stream which flows only during or immediately after a rainfall event, and contains no refuge pools capable of sustaining a viable community of aquatic organisms.

"**Epilimnion**" means the uppermost homothermal region of a stratified lake.

"**Eutrophication**" means the process whereby the condition of a waterbody changes from one of low biologic productivity and clear water to one of high productivity and water made turbid by the accelerated growth of algae.

"**Existing beneficial uses**" means those uses listed in Title 40 C.F.R. §131.3 actually attained by a waterbody on or after November 28, 1975. These uses may include public water supplies, fish and wildlife propagation, recreational uses, agriculture, industrial water supplies, navigation, and aesthetics.

"**Existing point source discharge(s)**" means, for purposes of OAC 252:730-5-25, point source discharges other than stormwater which were/are in existence when the ORW, HQW, or SWS, or SWS-R designation was/is assigned to the water(s) which receive(s) the discharge. The load from a point source discharge which is subject to the no increase limitation shall be based on the permitted mass loadings and concentrations, as appropriate, in the discharge permit effective when the limitation was assigned. Publicly owned treatment works may use design flow, mass loadings or concentration as appropriate if those flows, loadings or concentrations were approved as a portion of Oklahoma's Water Quality Management Plan prior to the application of the ORW, HQW, SWS or SWS-R limitation.

"Fecal coliform" means a group of organisms common to the intestinal tracts of humans and of animals. The presence of fecal coliform bacteria in water is an indicator of pollution and of potentially dangerous bacterial contamination.

"Fresh groundwater" means groundwater with naturally-occurring concentrations of total dissolved solids less than 10,000 mg/L, or with levels of total dissolved solids of 10,000 or more mg/L caused by human activities.

"Geometric mean" means the nth root of the product of the samples.

"Groundwater" means *waters of the state under the surface of the earth regardless of the geologic structure in which it is standing or moving outside the cut bank of any definite stream.* [82 O.S. § 1020.1(1)].

"Groundwater basin" means a distinct underground body of water overlain by contiguous land and having substantially the same geological and hydrological characteristics and yield capabilities".

"HLAC" means Habitat Limited Aquatic Community.

"HQW" means High Quality Water.

"HUC" means hydrologic unit code utilized by the United States Geologic Survey and other federal and state agencies as a way of identifying all drainage basins in the United States in a nested arrangement from largest to smallest, consisting of a multi-digit code which identifies each of the levels of classification within two-digit fields.

"Intolerant climax fish community" means habitat and water quality adequate to support game fishes or other sensitive species introduced or native to the biotic province or ecological region, which require specific or narrow ranges of high quality environmental conditions.

"Lake" means:

(A) An impoundment of waters of the state over 50 acre-feet in volume which is either:

(i) owned or operated by federal, state, county, or local government or

(ii) appears in Oklahoma's Clean Lakes Inventory.

(B) Surface impoundments which are used as a treatment works for the purpose of treating stabilizing or holding wastes are excluded from this definition.

"LC50" means lethal concentration and is the concentration of a toxicant in an external medium that is lethal to fifty percent of the test animals for a specified period of exposure.

"Long-term average flow" means an arithmetic average stream flow over a representative period of record.

"MDL" means the Method Detection Limit and is defined as the minimum concentration of an analyte that can be measured and reported with 99% confidence that the analyte concentration is greater than zero (0). MDL is dependent upon the analyte of concern.

"Mixing zone" means when a liquid of a different quality than the receiving water is discharged into the receiving water, a mixing zone is formed. Concentration of the liquid within the mixing zone decreases until it is completely mixed with receiving water. A regulatory mixing zone is described in OAC 252:730-5-26.

"Narrative criteria" means statements or other qualitative expressions of chemical, physical or biological parameters that are assigned to protect a beneficial use.

"Natural source" means source of contamination which is not human induced.

"NLW Impairment Study" means a scientific process of surveying the chemical, physical and biological characteristics of a nutrient threatened reservoir to determine whether the reservoir's beneficial uses are being impaired by human-induced eutrophication.

"Non-conservative element" means a substance which undergoes significant short-term degradation or change in the environment other than by dilution.

"Nonpoint source" means a source of pollution without a well defined point of origin.

"Normal stream flow conditions" means flow corresponding to low gradient areas in the hydrograph.

"NTU" means Nephelometric Turbidity Unit, which is the unit of measure using the method based upon a comparison of the intensity of light scattered by the sample under defined conditions with the intensity of light scattered by a standard reference suspension (formazin). The higher the intensity of scattered light, the higher the turbidity.

"Numerical criteria" means concentrations or other quantitative measures of chemical, physical or biological parameters that are assigned to protect a beneficial use.

"Numerical standard" means the most stringent of the numerical criteria assigned to the beneficial uses for a given stream.

"Nutrient impaired reservoir" means a reservoir with a beneficial use or uses determined by an NLW Impairment Study to be impaired by human-induced eutrophication.

"Nutrient-limited watershed" means a watershed of a waterbody with a designated beneficial use which is adversely affected by excess nutrients as determined by Carlson's Trophic State Index (using chlorophyll-a) of 62 or greater, or is otherwise listed as "NLW" in Appendix A of this Chapter.

"Nutrients" means elements or compounds essential as raw materials for an organism's growth and development; these include carbon, oxygen, nitrogen and phosphorus.

"ORW" means Outstanding Resource Water.

"OWRB" means Oklahoma Water Resources Board.

"PCBs" means polychlorinated biphenyls.

"Picocurie" means that quantity of radioactive material producing 2.22 nuclear transformations per minute.

"Point source" means any discernable, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, well, discrete fissure, container, rolling stock or concentrated animal feeding operation from which pollutants are or may be discharged. This term does not include return flows from irrigation agriculture.

"Pollutant" means any material, substance or property which may cause pollution.

"Pollution" means contamination or other alteration of the physical, chemical or biological properties of any natural waters of the State, or such discharge of any liquid, gaseous or solid substance into any waters of the State as will or is likely to create a nuisance or render such waters harmful, or detrimental or injurious to public health, safety or welfare, or to domestic, commercial, industrial, agricultural, recreational, or other legitimate beneficial uses, or to livestock, wild animals, birds, fish or other aquatic life. [82 O.S. §1084.2(1).]

"Polychlorinated biphenyls" means a group of organic compounds (206 possible) which are constructed of two phenyl rings and more than one chlorine atom.

"PQL" means Practical Quantitation Limit and is defined as 5 times the MDL. The PQL represents a practical and routinely achievable detection limit with high confidence.

"Put and take fishery" means the introduction of a fish species into a body of water for the express purpose of sport fish harvest where existing conditions preclude a naturally reproducing population.

"Q*" means dilution capacity.

"Salinity" means the concentration of salt in water.

"Sample standard" means the arithmetic mean of historical data from October 1976 to September 1983 except as otherwise provided in Appendix F of this Chapter, plus two standard deviations of the mean.

"Seasonal base flow" means the sustained or fair-weather runoff, which includes but is not limited to groundwater runoff and delayed subsurface runoff.

"Seasonal seven-day, two-year low flow" means the 7-day low flow of a stream likely to occur with a 50% probability for a season with the applicable dates in Table 1 of Appendix G of this Chapter.

"Seasonal 7Q2" means the seasonal seven-day, two-year low flow.

"Sensitive representative species" means Ceriodaphnia dubia, Daphnia magna, Daphnia pulex, Pimphales promelas (Fathead minnow), Lepomis macrochirus (Bluegill sunfish), or other sensitive organisms indigenous to a particular waterbody.

"SWS" means Sensitive Public and Private Water Supply.

"SWS-R" means waterbodies classified as sensitive public and private water supplies that may be augmented with reclaimed water for the purpose of indirect potable reuse.

"Seven-day, two-year low flow" means the 7-day low flow of a stream likely to occur with a 50% probability each year.

"7Q2" means the seven-day, two-year low flow.

"Standard deviation" means a statistical measure of the dispersion around the arithmetic mean of the data.

"Standard Methods" means the publication "Standard Methods for the Examination of Water and Wastewater", published jointly by the American Public Health Association, American Water Works Association, and Water Environment Federation.

"Standards" means when capitalized, this Chapter, which constitutes the Oklahoma Water Quality Standards described in 82 O.S. §1085.30. Whenever this term is not capitalized or is singular, it means the most stringent of the criteria assigned to protect the beneficial uses designated for a specified water of the State.

"Stormwater" means storm water runoff, snow melt runoff, and surface runoff and drainage.

"Subwatershed" means a smaller component of the larger watershed.

"Synergistic effect" means the presence of cooperative pollutant action such that the total effect is greater than the sum of the effects of each pollutant taken individually.

"Thermal pollution" means degradation of water quality by the introduction of heated effluent and is primarily a result of the discharge of the cooling waters from industrial processes, particularly from electrical power generation.

"Thermal stratification" means horizontal layers of different densities produced in a lake caused by temperature.

"Variance" means a time-limited designated use and criterion for a specific pollutant(s) or water quality parameter(s) that reflect the highest attainable condition during the term of the water quality standards variance.

"Warm Water Aquatic Community" means a subcategory of the beneficial use category "Fish and Wildlife Propagation" where the water quality and habitat are adequate to support intolerant climax fish communities and includes an environment suitable for the full range of warm water benthos.

"Wastes" means industrial waste and all other liquid, gaseous or solid substances which may pollute or tend to pollute any waters of the state. [82 O. S. §1084.2(2)]

"Waterbody" means any specified segment or body of waters of the state, including but not limited to an entire stream or lake or a portion thereof.

"Water quality" means physical, chemical, and biological characteristics of water which determine diversity, stability, and productivity of the climax biotic community or affect human health.

"Waters of the state" means all streams, lakes, ponds, marshes, watercourses, waterways, wells, springs, irrigation systems, drainage systems, and all other bodies or accumulations of

water, surface and underground, natural or artificial, public or private, which are contained within, flow through, or border upon this State or any portion thereof. [82 O.S. § 1084.2(3).]

"Watershed" means the drainage area of a waterbody including all direct or indirect tributaries.

"WWAC" means Warm Water Aquatic Community.

"Yearly mean standard" means the arithmetic mean of historical data from October 1976 to September 1983 except as otherwise provided in Appendix F of this Chapter, plus one standard deviation of the mean. The moving yearly mean standard is an average of the last five years of available data.

"Zone of passage" means a three dimensional zone expressed as a volume in the receiving stream through which mobile aquatic organisms may traverse the stream past a discharge without being affected by it. A regulatory zone of passage is described in OAC 252:730-5-26.

252:730-1-3. Adoption and enforceability of the standards

(a) The Oklahoma Water Quality Standards are adopted and promulgated as rules by the Oklahoma Department of Environmental Quality pursuant to the procedures specified in the Oklahoma Administrative Procedures Act, 75 O.S., § 250 et. seq., and the procedures and substantive law provided in 82 O.S., §1085.30, and are fully enforceable under the laws of Oklahoma.

(b) All waters of the state are protected by these Standards.

(c) Oklahoma Water Quality Standards adopted and promulgated by the Oklahoma Department of Environmental Quality shall be applicable to all activities which may affect the water quality of waters of the state and shall be utilized by all appropriate state environmental agencies in implementing their respective duties to abate and prevent pollution to waters of the state.

252:730-1-4. Testing procedures

All methods of sample collection, preservation, and analysis used in applying any of the standards shall be in accordance with Part 136 (40 C.F.R. Part 136) or other procedures approved by DEQ.

252:730-1-5. Revision procedures

(a) Any person may petition DEQ, under OAC 252:004, to modify or repeal any criterion or beneficial use designation.

(b) The petitioner, through objective and acceptable scientific studies, data and other information, shall be required to show that the requested modification or repeal will be in accordance with the requirements of applicable State and Federal law regarding water quality and in the best interest of the State.

(c) Procedures required by applicable state and Federal law for revising the designated beneficial uses and criteria or water quality shall be followed in any revision which is the subject of the petition.

(d) A petition to promulgate, amend, or repeal any water quality standard, criterion, or beneficial use designation shall follow the same procedures as for petitions for rulemaking as set forth in OAC 252:004.

252:730-1-6. Errors and separability

(a) Errors resulting from inadequate and erroneous data or human or clerical oversight will be subject to correction by the Oklahoma Department of Environmental Quality.

(b) The discovery of such errors does not render the remaining and unaffected Standards invalid.

(c) If any provision of these Standards, or the application of any provision of these Standards to any person or circumstances is held to be invalid, the application of such provisions to other persons and circumstances and the remainder of the Standards shall not be affected thereby.

SUBCHAPTER 3. ANTIDEGRADATION REQUIREMENTS

252:730-3-1. Purpose; antidegradation policy statement

(a) Waters of the state constitute a valuable resource and shall be protected, maintained, and improved for the benefit of all the citizens.

(b) It is the policy of the State of Oklahoma to protect all waters of the state from degradation of water quality, as provided in OAC 252:730-3-2 and Subchapter 13 of OAC 252:740.

252:730-3-2. Applications of antidegradation policy

(a) **Application to Outstanding Resource Waters (ORW).** Certain waters of the state constitute an outstanding resource or have exceptional recreational and/or ecological significance. These waters include streams designated "Scenic River" or "ORW" in Appendix A of this Chapter, and waters of the State located within watersheds of Scenic Rivers. Additionally, these may include waters located within National and State parks, forests, wilderness areas, wildlife management areas, and wildlife refuges, and waters which contain species listed pursuant to the federal Endangered Species Act as described in OAC 252:730-5-25(c)(2)(A) and OAC 252:740-13-6(c). No degradation of water quality shall be allowed in these waters.

(b) **Application to High Quality Waters (HOW).** It is recognized that certain waters of the state possess existing water quality which exceeds those levels necessary to support propagation of fishes, shellfishes, wildlife, and recreation in and on the water. These high quality waters shall be maintained and protected.

(c) **Application to Sensitive Public and Private Water Supplies (SWS) and SWS-R.** It is recognized that certain public and private water supplies possess conditions that make them more susceptible to pollution events and require additional protection. These sensitive water supplies shall be maintained and protected.

(d) **Application to beneficial uses.** Except as provided by 27 O.S. § 1-3-101(B), and subject to the provisions of 85 O.S. § 1085.30, no water quality degradation which will interfere with the attainment or maintenance of an existing or designated beneficial use shall be allowed.

(e) **Application to improved waters.** As the quality of any waters of the state improve, no degradation of such improved waters shall be allowed.

SUBCHAPTER 5. SURFACE WATER QUALITY STANDARDS

PART 1. GENERAL PROVISIONS

252:730-5-1. Declaration of policy; authority of board

(a) **General policy to protect, maintain and improve water quality.** Title 82 of the Oklahoma Statutes, Section 1084.1, provides as follows: *Whereas the pollution of the waters of this state constitutes a menace to public health and welfare, creates public nuisances, is harmful to wildlife, fish and aquatic life, and impairs domestic, agricultural, industrial, recreational and other legitimate beneficial uses of water, it is hereby declared to be the public policy of this state to conserve and utilize the waters of the state and to protect, maintain and improve the quality thereof for public water supplies, for the propagation of wildlife, fish and aquatic life and for domestic, agricultural, industrial, recreational and other legitimate beneficial uses; and to cooperate with*

other agencies of this state, agencies of other states and the federal government in carrying out these objectives. [82 O.S. § 1084.1]

(b) DEQ authority to promulgate Standards.

(1) Title 82 of the Oklahoma Statutes, Section 1085.30(A)(1)-(2) provides that DEQ is authorized to adopt, amend and otherwise promulgate rules to be known as 'Oklahoma Water Quality Standards' which establish classifications of uses of waters of the state, criteria to maintain and protect such classifications, and other standards or policies pertaining to the quality of such waters. The...Standards shall, at a minimum, be designed to maintain and protect the quality of the waters of the state. [82 O.S. § 1085.30(A)(1)-(2)]

(2) Title 82 of the Oklahoma Statutes, Section 1085.30(A)(3) provides, Wherever the Department finds it is practical and in the public interest to do so, the rules may be amended to upgrade and improve progressively the quality of waters of the state.[82 O.S. § 1085.30(A)(3)]

(3) Title 82 of the Oklahoma Statutes, Section 1085.30(A)(4)(a)-(b) provides that DEQ may also amend the Standards to downgrade a designated use of any waters of this state which is not an existing use, may establish subcategories of a use or may provide for less stringent criteria or other provisions thereof only in those limited circumstances permissible under the Federal Water Pollution Control Act as amended or federal rules which implement said act." and DEQ "may amend the...Standards to downgrade a designated use, establish subcategories of a use or may provide for less stringent criteria or other provisions thereof only to the extent as will maintain or improve the existing uses and the water quality of the water affected; provided, however, the Department shall not modify the...Standards applicable to scenic river areas as such areas are described by Section 896.5 of this title, to downgrade a designated use, establish a subcategory of a use or provide for less stringent criteria or other provisions thereof. [82 O.S. § 1085.30(A)(4)(a)-(b)]

252:730-5-2. Beneficial uses: existing and designated

(a) Beneficial uses are designated for all waters of the state. Such uses are protected through the restrictions imposed by the antidegradation policy statement, narrative criteria and numerical standards. Some uses require higher quality water than others. When multiple uses are assigned to the same waters, all such uses shall be protected. Beneficial uses are also protected by permits or other authorizations issued to meet these Standards for point sources and through practical management or regulatory programs for nonpoint sources. The criteria to protect the beneficial uses designated in OAC 252:730-5-3 or in Appendix A of this Chapter for certain surface waters of the state are described in sections OAC 252:730-5-10 through OAC 252:730-5-20 of this Chapter.

(b) Beneficial uses designated in OAC 252:730-5-3 or in Appendix A of this Chapter for certain surface waters of the state may be downgraded to a lower use or removed entirely, or subcategories of such designated uses may be established, if:

(1) the use, despite being designated, is not a use which is or has been actually attained in the water body on or after November 28, 1975; and

(2) for the use of Fish and Wildlife Propagation, Primary Body Contact Recreation or Secondary Body Contact Recreation, or any subcategory of such use or uses, it is demonstrated to the satisfaction of DEQ and the U.S. E.P.A. that attaining the designated use is not feasible because:

(A) naturally occurring pollutant concentrations prevent the attainment of the use, or

(B) natural, ephemeral, intermittent or low flow conditions or water levels prevent the attainment of the use, unless these conditions may be compensated for by the discharge of

sufficient volume of effluent discharges without violating state water conservation requirements to enable uses to be met, or

(C) human caused conditions or sources of pollution prevent the attainment of the use and cannot be remedied or would cause more environmental damage to correct than to leave in place, or

(D) dams, diversions or other types of hydrologic modifications preclude the attainment of the use, and it is not feasible to restore the water body to its original condition or to operate such modification in a way that would result in the attainment of the use, or

(E) physical conditions related to the natural features of the water body, such as the lack of a proper substrate, cover, flow, depth, pools, riffles, and the like, unrelated to water quality, preclude attainment of aquatic life protection uses, or

(F) controls more stringent than those required by sections 301(b) and 306 of the federal Clean Water Act as amended would result in substantial and widespread economic and social impact; and

(3) such downgrade, removal, or establishment of a subcategory will maintain or improve the quality of water affected.

252:730-5-3. Beneficial uses: default designations

(a) Surface waters excluding lakes.

(1) For those surface waters of the state not listed in Appendix A of this Chapter, excluding lakes, the following beneficial uses are designated:

(A) Irrigation Agriculture subcategory of the beneficial use classification Agriculture (see OAC 252:730-5-13),

(B) Aesthetics (see OAC 252:730-5-19),

(C) The Warm Water Aquatic Community subcategory of the beneficial use classification Fish and Wildlife Propagation (see OAC 252:730-5-12(c)), and

(D) Primary Body Contact Recreation (see OAC 252:730-5-16).

(2) The beneficial uses described in OAC 252:730-5-10 (Public and Private Water Supplies), OAC 252:730-5-11 (Emergency Public and Private Water Supplies), OAC 252:730-5-12(b) (the Habitat Limited Aquatic Community subcategory of the beneficial use classification Fish and Wildlife Propagation), and OAC 252:730-5-17 (Secondary Body Contact Recreation) shall be designated only following use attainability analyses.

(3) Beneficial use determinations that follow use attainability analyses are subject to administrative rulemaking proceedings including the public hearing process.

(b) Lakes.

(1) For lakes, including those listed in Appendix A of this Chapter, the following beneficial uses are designated:

(A) The Warm Water Aquatic Community subcategory of the beneficial use classification Fish and Wildlife Propagation (see OAC 252:730-5-12(c));

(B) Irrigation Agriculture subcategory of the beneficial use classification Agriculture (see OAC 252:730-5-13);

(C) Primary Body Contact Recreation (see OAC 252:730-5-16); and

(D) Aesthetics (see OAC 252:730-5-19).

(2) The beneficial use of Public and Private Water Supplies (see OAC 252:730-5-10) is specifically designated for certain lakes as provided in Appendix A of this Chapter. For all other lakes, the beneficial uses designated in this paragraph take control over the uses designated for stream segments which include descriptions of lakes or portions thereof identified in Appendix A of this Chapter.

252:730-5-4. Applicability of narrative and numerical criteria

(a) For purposes of permitting discharges for attainment of numerical criteria or establishing site specific criteria, streamflows of the greater of 1.0 cfs or 7Q2 shall be used to determine appropriate permit conditions unless otherwise provided in OAC 252:730 or OAC 252:740.

(b) When numerical criteria do not apply, water column conditions including dissolved oxygen concentrations, organoleptic compounds, nutrients, and oil and grease shall be maintained to prevent nuisance conditions caused by man's activities.

(c) Narrative criteria listed in this Chapter shall be maintained at all times and apply to all surface waters of the State.

(d) If more than one narrative or numerical criteria is assigned to a stream, the most stringent shall be maintained.

252:730-5-5. Water quality standard variance

(a) A water quality standards variance is a time-limited designated use and criterion for a specific pollutant(s) or water quality parameter(s) that reflect the highest attainable condition during the term of the water quality standards variance. All water quality standard variances shall be developed in accordance with and meet the requirements of 40 C.F.R. 131.14, which are hereby, incorporated by reference, and shall be subject to U.S. Environmental Protection Agency review and approval or disapproval.

(b) A water quality standard variance may be developed on a discharger specific, reach specific, waterbody specific, or other site-specific basis. The time-limited designated use and criterion associated with the water quality standard variance do not replace the underlying waterbody designated use and criterion. Additionally, all other applicable water quality standards not specifically addressed by the variance remain applicable. A water quality standard variance serves as the applicable water quality standard for implementing Oklahoma Pollutant Discharge Elimination System (OPDES) permit limits and CWA §401 certification for the term of the water quality standard variance. The underlying waterbody designated use and criterion shall remain applicable for all other CWA purposes.

252:730-5-6. Compliance schedules

Schedules for compliance with the Oklahoma Water Quality Standards may be granted to persons or facilities discharging wastes into waters of the state unless such discharge creates an actual or potential hazard to the public health.

252:730-5-7. Site-specific criteria

As needed, site-specific criteria may be developed to reflect site-specific waterbody conditions. Site-specific criteria must be based on sound scientific rationale and assure protection of beneficial uses. Site-specific criteria are developed on a case-by-case basis and depending on the particular case there may be various acceptable scientific approaches for developing site-specific criteria. However, in all cases prior to initiating development of a site-specific criteria, a detailed workplan consistent with DEQ or EPA technical guidance, if available, shall be submitted for review and approval by DEQ's Water Quality Division. Prior to the initiation of any work toward development of a site-specific criterion, interested parties shall coordinate with DEQ technical staff. Additional information and site-specific criteria adopted for certain waterbodies and conditions are found in Appendix E.

PART 3. BENEFICIAL USES AND CRITERIA TO PROTECT USES

252:730-5-9. General narrative criteria

- (a) **Minerals.** Increased mineralization from elements such as, but not limited to, calcium, magnesium, sodium and their associated anions shall not impair any beneficial use. Derivations of certain historic concentrations can be found in Appendix F of this Chapter.
- (b) **Solids (suspended and/or settleable).** The surface waters of the state shall be maintained so as to be essentially free of floating debris, bottom deposits, scum, foam and other materials, including suspended substances of a persistent nature, from other than natural sources.
- (c) **Taste and odor.** Taste and odor producing substances from other than natural origin shall not interfere with the production of a potable water supply by modern treatment methods or produce abnormal flavors, colors, tastes and odors in fish flesh or other edible wildlife, or result in offensive odors in the vicinity of the water, or otherwise impair any beneficial use.
- (d) **Nutrients.** Nutrients from point source discharges or other sources shall not cause excessive growth of periphyton, phytoplankton, or aquatic macrophyte communities which impairs any existing or designated beneficial use.

252:730-5-10. Public and private water supplies

The following criteria apply to surface waters of the state having the designated beneficial use of Public and Private Water Supplies:

(1) **Raw water numerical criteria.** For surface water designated as public and private water supplies, the numerical criteria for substances identified under the "Public and Private Water Supply (Raw Water)" column in Table 2 of Appendix G of this Chapter shall not be exceeded. Raw water numerical criteria are considered long-term average standards. For purposes of permitting discharges for attainment of these standards, the permitting authority shall use long-term average receiving stream flows and complete mixing of effluent and receiving water to determine appropriate permit limits.

(2) Radioactive materials.

(A) There shall be no discharge of radioactive materials in excess of the criteria found in Title 10 Code of Federal Regulations Part 20, Appendix B, Table 2.

(B) The concentration of gross alpha particles shall not exceed the criteria specified in (A) through (D) of this subparagraph, or the naturally occurring concentration, whichever is higher.

(i) The combined dissolved concentration of Radium-226 and Radium-228, and Strontium-90, shall not exceed 5 picocuries/liter, and 8 picocuries/liter, respectively.

(ii) Gross alpha particle concentrations, including Radium-226 but excluding radon and uranium, shall not exceed 15 picocuries/liter.

(iii) The gross beta concentration shall not exceed 50 picocuries/liter.

(iv) The average annual concentration of beta particle and photon radioactivity from man-made radionuclides in waters having the designated use of Public and Private Water supply shall not produce an annual dose equivalent to the total body or any internal organ greater than 4 millirem/year.

(3) Coliform bacteria.

(A) The bacteria of the total coliform group shall not exceed a monthly geometric mean of 5,000/100 ml at a point of intake for public or private water supply.

(B) The geometric mean will be determined by multiple tube fermentation or membrane filter procedures based on a minimum of not less than five (5) samples taken over a period of not more than thirty (30) days.

(C) Further, in no more than 5% of the total samples during any thirty (30) day period shall the bacteria of the total coliform group exceed 20,000/100 ml.

(D) In cases where both public and private water supply and primary body contact recreation uses are designated, the primary body contact criteria will apply.

(4) **Oil and grease (petroleum and non-petroleum related).** For Public and Private Water Supplies, surface waters of the State shall be maintained free from oil and grease and taste and odors.

(5) **General criteria.**

(A) The quality of the surface waters of the state which are designated as public and private water supplies shall be protected, maintained, and improved when feasible, so that the waters can be used as sources of public and private raw water supplies.

(B) These waters shall be maintained so that they will not be toxic, carcinogenic, mutagenic, or teratogenic to humans.

(6) **Water column criteria to protect for the consumption of fish flesh and water.**

(A) Surface waters of the state with the designated beneficial use of Public and Private Water Supply shall be protected to allow for the consumption of fish, shellfish and water.

(B) The water column numerical criteria to protect human health for the consumption of fish flesh and water for the substances identified in Table 2 of Appendix G of this Chapter shall be as prescribed under the "Fish Consumption and Water" column in Table 2 of Appendix G in all surface waters designated with the beneficial use of Public and Private Water Supply. Water column numerical criteria to protect human health for the consumption of fish flesh and water are considered long-term average standards. For purposes of permitting discharges for attainment of these standards, the permitting authority shall use long-term average receiving stream flows and complete mixing of effluent and receiving water to determine appropriate permit limits. Water column criteria to protect human health for the consumption of fish flesh only may be found in the column "Fish Consumption" in Table 2 of Appendix G of this Chapter.

(7) **Chlorophyll-a numerical criterion for certain waters.** The long-term average concentration of chlorophyll-a at a depth of 0.5 meters below the surface shall not exceed 0.010 milligrams per liter in Wister Lake, Tenkiller Ferry Reservoir, nor any waterbody designated SWS or SWS-R in Appendix A of this Chapter. Wherever such criterion is exceeded, numerical phosphorus or nitrogen criteria or both may be promulgated.

(8) **Phosphorus numerical criterion applicable to certain waters.** The long-term average total phosphorus concentration at a depth of 0.5 meters below the surface shall not exceed 0.0168 milligrams per liter in Lake Eucha and 0.0141 milligrams per liter in Spavinaw Lake.

252:730-5-11. Emergency Public and Private Water Supplies

(a) During emergencies, those waters designated Emergency Public and Private Water Supplies may be put to use.

(b) Each emergency will be handled on a case-by-case basis, and be thoroughly evaluated by the appropriate State agencies and/or local health authorities.

252:730-5-12. Fish and wildlife propagation

(a) **List of subcategories.** The narrative and numerical criteria in this section are designed to maintain and protect the beneficial use classification of "Fish and Wildlife Propagation". This classification encompasses several subcategories which are capable of sustaining different climax communities of fish and shellfish. These subcategories are Habitat Limited Aquatic Community,

Warm Water Aquatic Community, Cool Water Aquatic Community (Excluding Lake Waters), and Trout Fishery (Put and Take).

(b) Habitat Limited Aquatic Community subcategory.

(1) Habitat limited aquatic community means a subcategory of the beneficial use "Fish and Wildlife Propagation" where the water chemistry and habitat are not adequate to support a "Warm Water Aquatic Community" because:

(A) Naturally occurring water chemistry prevents the attainment of the use; or

(B) Naturally occurring ephemeral, intermittent or low flow conditions or water levels prevent the attainment of the use, unless these conditions may be compensated for by the discharge of a sufficient volume of effluent to enable uses to be met; or

(C) Human caused conditions or sources of pollution prevent the attainment of the use and cannot be remedied or would cause more environmental damage to correct than to leave in place; or

(D) Dams, diversions or other types of hydrologic modifications preclude the attainment of the use, and it is not feasible to restore the waterbody to its original condition or to operate such modification in a way that would result in the attainment of the use; or

(E) Physical conditions related to the natural features of the waterbody, such as the lack of a proper substrate, cover, flow, depth, pools, riffles, and the like, unrelated to water quality, preclude attainment of the "Warm Water Aquatic Community" beneficial use.

(2) Habitat Limited Aquatic Community may also be designated where controls more stringent than those required by sections 301(b) and 306 of the federal Clean Water Act as amended, which would be necessary to meet standards or criteria associated with the beneficial use subcategories of Cool Water Aquatic Community or Warm Water Aquatic Community, would result in substantial and widespread economic and social impact.

(c) Warm Water Aquatic Community subcategory. Warm Water Aquatic Community means a subcategory of the beneficial use category "Fish and Wildlife Propagation" where the water quality and habitat are adequate to support climax fish communities.

(d) Cool Water Aquatic Community subcategory. Cool Water Aquatic Community means a subcategory of the beneficial use category "Fish and Wildlife Propagation" where the water quality, water temperature and habitat are adequate to support cool water climax fish communities and includes an environment suitable for the full range of cool water benthos. Typical species may include smallmouth bass, certain darters and stoneflies.

(e) Trout Fishery subcategory. Trout Fishery (Put and Take) means a subcategory of the beneficial use category "Fish and Wildlife Propagation" where the water quality, water temperature and habitat are adequate to support a seasonal put and take trout fishery. Typical species may include trout.

(f) Criteria used in protection of Fish and Wildlife Propagation. The narrative and numerical criteria to maintain and protect the use of "Fish and Wildlife Propagation" and its subcategories shall include:

(1) Dissolved oxygen.

(A) Dissolved oxygen (DO) criteria are designed to protect the diverse aquatic communities of Oklahoma.

(B) Allowable loadings designed to attain these dissolved oxygen criteria are provided as follows:

(i) For streams with sufficient historical data, the allowable load shall be based on meeting the dissolved oxygen concentration standard at the seven-day, two-year low flow and the appropriate seasonal temperatures prescribed in Table 1 of Appendix G of this Chapter.

- (ii) For streams lacking sufficient historical data, or when the appropriate flow is less than one (1) cubic foot per second (cfs), the allowable load shall be based on meeting the dissolved oxygen concentration standard at one (1) cfs and the appropriate seasonal temperature.
- (iii) Provided, for streams designated in OAC 252:730 Appendix A as HLAC or WWAC which have sufficient historical data as determined by the permitting authority, the allowable BOD load may be based upon meeting the dissolved oxygen concentration standard at the applicable seasonal temperature and corresponding seasonal seven-day, two-year low flow.
- (iv) Provided further, in stream segments where dams or other structures have substantially affected the historic flow regime of the stream segment, including but not limited to the portions of the Verdigris and Arkansas Rivers constituting the McClellan-Kerr Arkansas River Navigation System, a properly designed and implemented site-specific hydrologic study approved by the permitting authority and DEQ may be used to determine the appropriate regulatory low flow. In such circumstances, the allowable BOD load may be based upon meeting the dissolved oxygen concentration standard at the applicable seasonal temperature and the site-specific regulatory low flow.
- (C) Except for naturally occurring conditions, the dissolved oxygen criteria are as set forth in Table 1 of Appendix G of this Chapter. Additionally:
 - (i) For streams, no more than two DO samples shall exhibit a DO concentration of less than 2.0 mg/L in any given year.
 - (ii) For lakes, no more than 50% of the water volume shall exhibit a DO concentration less than 2.0 mg/L. If no volumetric data is available, then no more than 70% of the water column at any given sample site shall exhibit a DO concentration less than 2.0 mg/L. If a lake specific study including historical analysis demonstrates that a different percent volume or percent water column than described above is protective of the WWAC use, then that lake specific result takes precedence.

(2) Temperature.

- (A) At no time shall heat be added to any surface water in excess of the amount that will raise the temperature of the receiving water more than 2.8 °C outside the mixing zone.
- (B) The normal daily and seasonal variations that were present before the addition of heat from other than natural sources shall be maintained.
- (C) In streams, temperature determinations shall be made by averaging representative temperature measurements of the cross sectional area of the stream at the end of the mixing zone.
- (D) In lakes, the temperature of the water column and/or epilimnion, if thermal stratification exists, shall not be raised more than 1.7 °C above that which existed before the addition of heat of artificial origin, based upon the average of temperatures taken from the surface to the bottom of the lake, or surface to the bottom of the epilimnion if the lake is stratified.
- (E) No heat of artificial origin shall be added that causes the receiving stream water temperature to exceed the maximums specified below:
 - (i) The critical temperature plus 2.8 °C in warm water and habitat limited aquatic community streams and lakes except in the segment of the Arkansas River from Red Rock Creek to the headwaters of Keystone Reservoir where the maximum temperature shall not exceed 34.4 °C.
 - (ii) 28.9°C in streams designated cool water aquatic community.
 - (iii) 20°C in streams designated trout fishery (put and take).

(F) Water in privately-owned reservoirs used in the process of cooling water for industrial purposes is exempt from these temperature restrictions, provided the water released from any such lake or reservoir into a stream system shall meet the water quality standards of the receiving stream.

(3) **pH (hydrogen ion activity).** The pH values shall be between 6.5 and 9.0 in waters designated for fish and wildlife propagation; unless pH values outside that range are due to natural conditions.

(4) **Oil and grease (petroleum and non-petroleum related).**

(A) All waters having the designated beneficial use of any subcategory of fish and wildlife propagation shall be maintained free of oil and grease to prevent a visible sheen of oil or globules of oil or grease on or in the water.

(B) Oil and grease shall not be present in quantities that adhere to stream banks and coat bottoms of water courses or which cause deleterious effects to the biota.

(5) **Biological criteria.**

(A) Aquatic life in all waterbodies with the beneficial use designation of Fish and Wildlife Propagation (excluding waters designated "Trout, put-and-take") shall not exhibit degraded conditions as indicated by one or both of the following:

(i) Comparative regional reference data from a station of reasonably similar watershed size or flow, habitat type and Fish and Wildlife beneficial use subcategory designation or

(ii) By comparison with historical data from the waterbody being evaluated.

(B) Compliance with the biological criteria to protect Fish and Wildlife Propagation set forth in this paragraph shall be based upon measures including, but not limited to, diversity, similarity, community structure, species tolerance, trophic structure, dominant species, indices of biotic integrity (IBI's), indices of well being (IWB's), or other measures.

(6) **Toxic substances (for protection of fish and wildlife).**

(A) Surface waters of the state shall not exhibit acute toxicity and shall not exhibit chronic toxicity outside the chronic regulatory mixing zone. Acute test failure and chronic test failure shall be used to determine discharger compliance with these narrative aquatic life toxics criteria. The narrative criterion specified in this subparagraph (A) which prohibits acute toxicity shall be maintained at all times and shall apply to all surface waters of the state. The narrative criterion specified in this subparagraph (A) which prohibits chronic toxicity shall apply at all times outside the chronic regulatory mixing zone and within the zone of passage to all waters of the state except:

(i) When a discharge into surface waters designated with the Fish and Wildlife Propagation beneficial use complies with and meets the discharge permit limitations but the flow immediately upstream from the discharge is less than one (1) cubic foot per second or when the flow falls below the seven-day, two-year low-flow, whichever is larger. For purposes of the permitting process, the regulatory low flow shall be the larger of one (1) cubic foot per second or the seven-day, two-year low flow; and

(ii) To streams listed as ephemeral in Appendix A.

(B) Procedures to implement these narrative criteria are found in OAC 252:740 Subchapter 3.

(C) Toxicants for which there are specific numerical criteria are listed in Table 2 of Appendix G of this Chapter.

(D) For toxicants not specified in Table 2 of Appendix G of this Chapter, concentrations of toxic substances with bio-concentration factors of 5 or less shall not exceed 0.1 of

published LC50 value(s) for sensitive representative species using standard testing methods, giving consideration to site specific water quality characteristics.

(E) Concentrations of toxic substances with bio-concentration factors greater than 5 shall not exceed 0.01 of published LC50 value(s) for sensitive representative species using standard testing methods, giving consideration to site-specific water quality characteristics.

(F) Permit limits to prevent toxicity caused by discharge of chlorine and ammonia are determined pursuant to the narrative criteria contained within (A) and (B) of this paragraph.

(G) The acute and chronic numerical criteria listed in the "Fish and Wildlife Propagation" column in Table 2 of Appendix G of this Chapter apply to all waters of the state designated with any of the beneficial use sub-categories of Fish and Wildlife Propagation. The numerical criteria which prohibit acute toxicity apply outside the acute regulatory mixing zone.

(i) The numerical criteria specified in Table 2 of Appendix G which prohibit chronic toxicity shall apply at all times outside the chronic regulatory mixing zone and within the zone of passage to all waters of the state except:

(I) When a discharge into surface waters designated with the Fish and Wildlife Propagation beneficial use complies with and meets the discharge permit limitations but the flow immediately upstream from the discharge is less than one (1) cubic foot per second or when the flow falls below the seven-day, two-year low-flow, whichever is larger. For purposes of the permitting process, the regulatory low flow shall be the larger of one (1) cubic foot per second or the seven-day, two-year low flow; and

(II) To streams listed as ephemeral in Appendix A.

(ii) Equations are presented in Table 2 of Appendix G for those substances whose toxicity varies with water chemistry.

(H) For purposes of assessment per OAC 252:740-15-5, the conversion factors identified in Table 3 of Appendix G of this Chapter may be used to convert the total recoverable metals criteria set forth in Table 2 of Appendix G into dissolved metals values. Such dissolved metals values may be determined by multiplying the total recoverable numerical criteria in OAC 252:730 Appendix G, Table 2 by the conversion factors identified in Table 3 of Appendix G.

(7) Turbidity.

(A) Turbidity from other than natural sources shall be restricted to not exceed the following numerical limits:

(i) Cool Water Aquatic Community/Trout Fisheries: 10 NTUs;

(ii) Lakes: 25 NTUs; and

(iii) Other surface waters: 50 NTUs.

(B) In waters where background turbidity exceeds these values, turbidity from point sources shall be restricted to not exceed ambient levels.

(C) Numerical criteria listed in (A) of this paragraph apply only to seasonal base flow conditions.

(D) Elevated turbidity levels may be expected during, and for several days after, a runoff event.

(8) **Sediments.** Concentrations or loads of suspended or bedded sediments that are caused by human activity shall not impair the Fish and Wildlife Propagation use or any subcategory thereof.

252:730-5-13. Agriculture

(a) **General.** The surface waters of the state shall be maintained so that toxicity does not inhibit continued ingestion by livestock or irrigation of crops.

(b) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning unless the context clearly indicates otherwise:

(1) "Long-term average concentration" means the arithmetic mean of at least ten samples taken across at least twelve months.

(2) "Short-term average concentration" means the arithmetic mean of all samples taken during any 30-day period.

(c) **Subcategories of the Agriculture beneficial use.**

(1) The narrative and numerical criteria stated or referenced in this section and in Appendix F of this chapter are designed to maintain and protect the beneficial use classification of "Agriculture". This classification encompasses two subcategories which are capable of sustaining different agricultural applications. These subcategories are Irrigation Agriculture and Livestock Agriculture.

(2) Irrigation Agriculture means a subcategory of the Agriculture beneficial use requiring water quality conditions that are dictated by individual crop tolerances.

(3) Livestock Agriculture is a subcategory of the Agriculture beneficial use requiring much less stringent protection than crop irrigation.

(4) If a waterbody is designated in Appendix A of this Chapter with the Agriculture beneficial use but does not have a designation of a subcategory thereof, the criteria for Irrigation Agriculture shall be applicable.

(d) **Highly saline water.** Highly saline water should be used with best management practices as outlined in "Diagnosis and Reclamation of Saline Soils," United States Department of Agriculture Handbook No. 60 (1958).

(e) **General criteria for the protection of Irrigation Agriculture.** This subsection prescribes general criteria to protect the Irrigation Agriculture subcategory. For chlorides, sulfates and total dissolved solids at 180 °C (see Standard Methods), the arithmetic mean of the concentration of the samples taken for a year in a particular segment shall not exceed the historical "yearly mean standard" determined from the table in Appendix F of this Chapter. For permitting purposes, the long-term average concentration shall not exceed the yearly mean standard. Yearly mean standards shall be implemented by the permitting authority using the greater of 1.47 cfs or long-term average flows and complete mixing of effluent and receiving water. For permitting purposes, the short term average concentration shall not exceed the sample standard. Sample standards shall be implemented by the permitting authority using the greater of 1.0 cfs or short term average flows and complete mixing of effluent and receiving water. The data from sampling stations in each segment are averaged, and the mean chloride, sulfate, and total dissolved solids at 180 °C are presented in Appendix F of this Chapter. Segment averages shall be used unless more appropriate data are available.

(f) **Historic concentrations.** The table in Appendix F of this Chapter contains statistical values from historical water quality data of mineral constituents. In cases where mineral content varies within a segment, the most pertinent data available should be used.

(g) **Criteria to protect Irrigation Agriculture subcategory.** For the purpose of protecting the Irrigation Agriculture subcategory, neither long-term average concentrations nor short term average concentrations of minerals shall be required to be less than 700 mg/L for TDS, nor less than 250 mg/L for either chlorides or sulfates.

(h) **Criteria to protect Livestock Agriculture subcategory.** For the purpose of protecting the Livestock Agriculture subcategory, neither long-term average concentrations nor short term average concentrations of minerals shall be required to be less than 2500 mg/L for TDS.

(i) **Support tests.** For purposes of assessment, listing and reporting under sections 303(d) and 305(b) of the federal Clean Water Act as amended, the procedure for determining use support of the Agriculture beneficial use or any subcategory thereof with respect to TDS, chlorides and sulfates shall be as follows:

(1) The Agriculture beneficial use designated for a waterbody shall be deemed to be fully supported with respect to TDS or chlorides or sulfates if both the mean of all sample concentrations calculated for that parameter from that waterbody do not exceed the yearly mean standard prescribed in OAC 252:730 Appendix F or site specific criteria prescribed in OAC 252:730 Appendix E, and no more than 10% of the sample concentrations from that waterbody exceed the sample standard prescribed in OAC 252:730 Appendix F or site specific criteria prescribed in OAC 252:730 Appendix E.

(2) The Agriculture beneficial use designated for a waterbody shall be deemed to be not supported with respect to TDS or chlorides or sulfates if either the mean of all sample concentrations calculated for that parameter from that waterbody exceeds the yearly mean standard prescribed in OAC 252:730 Appendix F or site specific criteria prescribed in OAC 252:730 Appendix E, or greater than 10% of the sample concentrations from that waterbody exceed the sample standard prescribed in Appendix F or site specific criteria prescribed in OAC 252:730 Appendix E. Provided, if the sample concentrations are each less than 700 mg/L for TDS, or less than 250 mg/L for either chlorides or sulfates, then the Agriculture beneficial use shall be deemed to be fully supported for that parameter.

252:730-5-14 [RESERVE]

252:730-5-15 [RESERVE]

252:730-5-16. Primary Body Contact Recreation

(a) Primary Body Contact Recreation involves direct body contact with the water where a possibility of ingestion exists. In these cases the water shall not contain chemical, physical or biological substances in concentrations that are irritating to skin or sense organs or are toxic or cause illness upon ingestion by human beings.

(b) In waters designated for Primary Body Contact Recreation the following limits for bacteria set forth in (c) of this section shall apply only during the recreation period of May 1 to September 30. The criteria for Secondary Body Contact Recreation will apply during the remainder of the year.

(c) Compliance with OAC 252:730-5-16 shall be based upon meeting the requirements of one of the options specified in (1) or (2) of this subsection (c) for bacteria. Upon selection of one (1) group or test method, said method shall be used exclusively over the time period prescribed therefore. Provided, where concurrent data exist for multiple bacterial indicators on the same waterbody or waterbody segment, no criteria exceedances shall be allowed for any indicator group.

(1) *Escherichia coli (E. coli)*: The E. coli geometric mean criterion is 126/100 ml. For swimming advisory and permitting purposes, E. coli shall not exceed a monthly geometric mean of 126/100 ml based upon a minimum of not less than five (5) samples collected over a period of not more than thirty (30) days. For swimming advisory and permitting purposes, no sample shall exceed a 75% one-sided confidence level of 235/100 ml in lakes and high use waterbodies and the 90% one-sided confidence level of 406/100 ml in all other Primary Body Contact Recreation beneficial use areas. These values are based upon all samples collected over the recreation period. For purposes of sections 303(d) and 305(b) of the federal Clean Water Act as amended, beneficial use support status shall be assessed using only the geometric

mean criterion of 126/100 milliliters compared to the geometric mean of all samples collected over the recreation period.

(2) *Enterococci*: The Enterococci geometric mean criterion is 33/100 ml. For swimming advisory and permitting purposes, Enterococci shall not exceed a monthly geometric mean of 33/100 ml based upon a minimum of not less than five (5) samples collected over a period of not more than thirty (30) days. For swimming advisory and permitting purposes, no sample shall exceed a 75% one-sided confidence level of 61/100 ml in lakes and high use waterbodies and the 90% one-sided confidence level of 108/100 ml in all other Primary Body Contact Recreation beneficial use areas. These values are based upon all samples collected over the recreation period. For purposes of sections 303(d) and 305(b) of the federal Clean Water Act as amended, beneficial use support status shall be assessed using only the geometric mean criterion of 33/100 milliliters compared to the geometric mean of all samples collected over the recreation period.

252:730-5-17. Secondary Body Contact Recreation

(a) The water quality requirements for Secondary Body Contact Recreation are usually not as stringent as for Primary Body Contact Recreation.

(b) The Secondary Body Contact Recreation beneficial use is designated where ingestion of water is not anticipated.

(c) Associated activities may include boating, fishing, or wading.

(d) Waters so designated shall be maintained to be free from human pathogens in numbers which may produce adverse health effects in humans.

252:730-5-18. Navigation

This beneficial use is generally more dependent upon quantity than quality of water.

252:730-5-19. Aesthetics

(a) To be aesthetically enjoyable, the surface waters of the state must be free from floating materials and suspended substances that produce objectionable color and turbidity.

(b) The water must also be free from noxious odors and tastes, from materials that settle to form objectionable deposits, and discharges that produce undesirable effects or are a nuisance to aquatic life.

(c) The following criteria apply to protect this use:

(1) **Color.** Surface waters of the state shall be virtually free from all coloring materials which produce an aesthetically unpleasant appearance.

(2) **Total phosphorus criterion applicable to designated Scenic River reaches of Mountain Fork River; Lee Creek and Little Lee Creek.** The thirty (30) day geometric mean total phosphorus concentration shall not exceed 0.037 mg/L. The criterion stated in this subparagraph applies in addition to, and shall be construed as to be consistent with, any other provision of this Chapter which may be applicable to such waters.

(3) **Total phosphorus criterion applicable to designated Scenic River reaches of Illinois River, Flint Creek, and Barren Fork Creek.** The total phosphorus six month rolling average of 0.037 mg/L shall not be exceeded more than once in a one-year period and not more than three times in a five-year period. The criterion stated in this subparagraph applies in addition to, and shall be construed so as to be consistent with, any other provision of this Chapter which may be applicable to such waters.

252:730-5-20. Fish consumption

(a) **General.** The surface waters of the state shall be maintained so that toxicity does not inhibit ingestion of fish and shellfish by humans. The numerical criteria and values for substances listed in the column "Fish Consumption" in Table 2 of Appendix G of this Chapter shall apply to surface waters designated as Warm Water Aquatic Community, Cool Water Aquatic Community, or Trout Fishery.

(b) **Water column criteria to protect for the consumption of fish flesh.** The water column numerical criteria (total recoverable) identified in the "Fish Consumption" column in Table 2 of Appendix G protect human health for the consumption of fish, shellfish and aquatic life. Water column numerical criteria to protect human health for human consumption of fish flesh are considered long-term average standards. For purposes of permitting discharges for attainment of these standards, the permitting authority shall use long-term average receiving stream flows and complete mixing of effluent and receiving water to determine appropriate permit limits.

(c) **Fish tissue levels.** Surface waters of the state shall be maintained to prevent bio-concentration of toxic substances in fish, shellfish, or other aquatic organisms to levels that become a risk to human health.

PART 5. SPECIAL PROVISIONS

252:730-5-25. Implementation policies for the antidegradation policy statement

(a) The following provisions set forth exceptions to the limitations stated in OAC 252:730-5-25(c) for additional protection of certain waters of the state:

(1) The limitations contained in OAC 252:730-5-25(c)(1) for additional protection of Outstanding Resource Waters shall apply to all discharges from point sources except such limitations do not apply to discharges of stormwater from temporary construction activities. Discharges of stormwater from point sources existing as of June 25, 1992, whether or not such stormwater discharges were permitted as point sources prior to June 25, 1992, are also excepted from the OAC 252:730-5-25(c)(1) rule prohibiting any new point source discharges, but such stormwater discharges are prohibited from increased load of any pollutant.

(2) The limitations for additional protection of Appendix B Waters (OAC 252:730-5-25(c)(2)), High Quality Waters (OAC 252:730-5-25(c)(3)), Sensitive Public and Private Water Supplies (OAC 252:730-5-25(c)(4)), and SWS-R waterbodies (OAC 252:730-5-25(c)(8)) shall apply to discharges from all point sources except point source discharges of stormwater.

(b) For purposes of OAC 252:730-5-25, the term "specified pollutants" means:

(1) Oxygen demanding substances, measured as Carbonaceous Biochemical Oxygen Demand (CBOD) and/or Biochemical Oxygen Demand (BOD);

(2) Ammonia Nitrogen and/or Total Organic Nitrogen;

(3) Phosphorus;

(4) Total Suspended Solids (TSS);

(5) Such other substances as may be determined by DEQ.

(c) The following limitations for additional protection apply to various waters of the state:

(1) Outstanding Resource Waters (ORW).

(A) Outstanding Resource Waters (ORW) are those waters of the state which constitute outstanding resources or are of exceptional recreational and/or ecological significance as described in OAC 252:730-3-2(a).

(B) The following waterbodies are prohibited from having any new point source discharge(s) of any pollutant or increased load of any pollutant from existing point source discharge(s):

- (i) Waterbodies designated "ORW" and/or "Scenic River" in Appendix A of this Chapter;
- (ii) Waterbodies located within the watersheds of waterbodies designated "Scenic River" in Appendix A of this Chapter; and
- (iii) Waterbodies located within the boundaries of Appendix B areas which are specifically designated "ORW" in Appendix A of this Chapter.

(2) Appendix B Waters.

- (A) Appendix B waters are those waters of the state which are located within the boundaries of areas listed in Appendix B of this Chapter, including but not limited to the National and State parks, forests, wilderness areas, wildlife management areas, and wildlife refuges. Appendix B also may include those areas which are inhabited by federally listed, threatened or endangered species, and other appropriate areas.
- (B) Only those Appendix B waters specifically designated "ORW" in Appendix A of this Chapter shall be afforded the limitations for additional protection described in OAC 252:730-5-25(c)(1)(B).
- (C) New discharges or increased loading from existing discharges to Appendix B waters may be allowed under such conditions that ensure that the recreational and ecological significance of these waters will be maintained.
- (D) Discharges or other activities associated with those waters listed in Appendix B, Table 2 containing federally listed threatened or endangered species may be restricted through agreements between appropriate regulatory agencies and the United States Fish and Wildlife Service.

(3) High Quality Waters (HQW).

- (A) High Quality Waters (HQW) are those waters of the state whose historic water quality and physical habitat provide conditions suitable for the support of sensitive and intolerant climax communities of aquatic organisms whether or not that waterbody currently contains such a community, support high levels of recreational opportunity, and are designated "HQW" waters in Appendix A of this Chapter. These waters will generally have higher quality habitat, a more diverse and more intolerant biotic community and, as a result, may provide more ecological refuges and recreational opportunities than other waters in the same ecoregion with similar chemistry and physical conditions.
- (B) All waterbodies designated with the limitation indicated by the letters "HQW" in Appendix A are prohibited from having any new point source discharge(s) of any pollutant or increased load or concentration of specified pollutants from existing point source discharge(s), provided however that new point source discharge(s) or increased load of specified pollutants described in OAC 252:730-5-25(b) may be approved by the permitting authority in those circumstances where the discharger demonstrates to the satisfaction of the permitting authority that a new point source discharge or increased load from an existing point source discharge will result in maintaining or improving the level of water quality which exceeds that necessary to support recreation and propagation of fishes, shellfishes, and wildlife of the direct receiving water and downstream waterbodies designated HQW. As specified in OAC 252:730-3-2(b) and (d), no discharge of any pollutant to a water designated HQW may lower existing water quality.
- (C) Waters designated HQW after July 1, 2007 will demonstrate (1) 95% of water quality measurements for multiple parameters from metals, organics and general physicochemical water quality descriptors better than the promulgated criteria in Appendix G of this chapter at multiple stations on the segment, (2) an unimpaired biological community as determined

by the application of Appendix C of Title 252 Chapter 740, and (3) significant local support for promulgation of the HQW designation.

(4) Sensitive Public and Private Water Supplies (SWS).

(A) Waters designated "SWS" are those waters of the state which constitute sensitive public and private water supplies as a result of their unique physical conditions and are listed in Appendix A of this Chapter as "SWS" waters. These are waters (a) currently used as water supply reservoirs, (b) that generally possess a watershed of less than approximately 100 square miles or (c) as otherwise designated by DEQ.

(B) New point source discharges of any pollutant after June 11, 1989, and increased load of any specified pollutant from any point source discharge existing as of June 11, 1989, shall be prohibited in any waterbody or watershed designated in Appendix A of this Chapter with the limitation "SWS". Any discharge of any pollutant to a waterbody designated "SWS" which would, if it occurred, lower existing water quality shall be prohibited, provided however that new point source discharge(s) or increased load of specified pollutants described in OAC 252:730-5-25(b) may be approved by the permitting authority in those circumstances where the discharger demonstrates to the satisfaction of the permitting authority that a new point source discharge or increased load from an existing point source discharge will result in maintaining or improving the water quality of both the direct receiving water and any downstream waterbodies designated SWS.

(5) Prioritization of limitations. In situations where more than one beneficial use limitation exists for a waterbody, the more stringent limitation shall apply.

(6) Non-Point source discharges or runoff. Best management practices for control of non-point source discharges or runoff should be implemented in watersheds of waterbodies designated "ORW", "HQW", "SWS" or "SWS-R" in Appendix A of this Chapter and/or located within areas listed in Appendix B provided however that development of conservation plans shall be required in sub-watersheds where discharges or runoff from non-point sources are identified as causing, or significantly contributing to, degradation in a waterbody designated "ORW".

(7) Culturally Significant Waters (CSW).

(A) Waters designated as CSW in Appendix A of this Chapter are those identified by recognized tribal authorities as critical to maintaining the waters' utility for cultural, historic, recreational or ceremonial uses and which may require more stringent protection measures to protect human health or aquatic life or both.

(B) All activities associated with a CSW may require consultation with the duly authorized Tribal authority to assure that the proposed activity is consistent with applicable tribal environmental laws.

(8) Sensitive Public and Private Water Supplies with Reuse (SWS-R).

(A) Waters designated "SWS-R" are those waters of the state which constitute sensitive public and private water supplies that may be augmented with reclaimed municipal water for the purpose of indirect potable reuse (IPR). SWS-R waterbodies are identified in Appendix A of this Chapter. These are waters currently used as water supply reservoirs, that generally possess a watershed of less than approximately 100 square miles, or as otherwise designated by DEQ.

(B) New point source discharges of any pollutant after June 11, 1989, and increased load of any specified pollutant from any point source discharge existing as of June 11, 1989, shall be prohibited in any waterbody or watershed designated in Appendix A of this Chapter with the limitation "SWS-R" except as outlined in 8(C) below.

(C) New point source municipal wastewater discharges or increased loading from existing point source municipal wastewater discharges to a SWS-R waterbody or watershed shall achieve a minimum level of effluent quality that is attainable using demonstrated treatment technologies or other alternatives. Approaches for required technology-based limitations and or other alternatives are outlined in OAC 252:740-13-4(e). A discharge to a SWS-R waterbody may be permitted provided:

(i) A determination of the waterbody's assimilative capacity for all applicable narrative and numeric criteria shall be the responsibility of the discharger;

(ii) If assimilative capacity exists for any applicable narrative or numeric criteria, the discharger shall document what portion, if any, of the assimilative capacity is reasonable to maintain. If it is proposed that it is not reasonable to maintain any, or a portion, of the assimilative capacity, a report consistent with all 40 C.F.R. 131.12(a)(2) requirements describing the available assimilative capacity and providing justification for consuming all or a portion of the assimilative capacity shall be submitted by the discharger to DEQ for review;

(iii) DEQ may approve both the determination of assimilative capacity and the proposed consumption of any, or all, of the assimilative capacity if it is found to be necessary based on the aforementioned report and consistent with the requirements described in 40 C.F.R. 131.12(a)(2);

(iv) All existing and designated beneficial uses of the receiving waterbody and downstream waterbodies shall be maintained; and,

The discharge shall not impair human health even during drought of record conditions.

(D) SWS-R waterbodies, with permitted discharge, shall be technically evaluated by permitted parties at least once every five years to determine the attainment or nonattainment of beneficial uses. Technical evaluation reports, including all data and information necessary to allow independent analysis, shall be submitted to the permitting authority for review. If the report documents nonattainment of a beneficial use(s) resulting from the discharge, the permitting authority shall consider actions including, but not limited to, additional permit requirements, cessation of the discharge, and or a recommendation to DEQ to revoke the SWS-R waterbody classification.

252:730-5-26. Mixing zones and zones of passage

(a) Mixing zones.

(1) In streams, the chronic regulatory mixing zone extends downstream a distance equivalent to thirteen (13) times the width of the water within the receiving stream at the point of effluent discharge and encompasses 25% of the total stream flow of the 7Q2 or 1 cfs, whichever is larger, immediately downstream of the point of effluent discharge.

(2) The acute regulatory mixing zone is encompassed by the $R = 0.01$ (cfs⁻¹) isopleth. R is the ratio of concentration to wasteload.

(3) Acute toxicity within the mixing zone is prohibited.

(4) Mixing zones in lakes shall be designated on a case-by-case basis.

(5) The water quality in a portion of the mixing zone may be unsuitable for certain beneficial uses.

(6) Where overlapping mixing zones occur because of multiple outfalls, the total length of the chronic regulatory mixing zone will extend thirteen (13) stream widths downstream from the downstream discharge point.

(b) Zones of passage.

- (1) All discharges permitted for any criteria listed for protection of fish and wildlife propagation shall be regulated to ensure that a zone of passage shall be maintained within the stream at the outfall and adjacent to the mixing zone that shall be no less than seventy-five percent (75%) of the volume of flow.
- (2) Water quality standards shall be maintained throughout the zone of passage.
- (3) Zones of passage in lakes shall be designated on a case-by-case basis.

252:730-5-27 [RESERVE]

252:730-5-28 [RESERVE]

252:730-5-29. Delineation of NLW areas

(a) **Scope and applicability.** This Section prescribes in greater detail than OAC 252:730 Appendix A the spatial limitations for nutrient-limited watershed areas. The "NLW" designations in OAC 252:730 Appendix A are independent of and have no bearing on other designations such as those for beneficial uses or anti-degradation limitations.

(b) **List and descriptions of Nutrient-Limited Watersheds.** This subsection describes all areas which are nutrient limited watersheds and subject to the "NLW" designation. These are the only areas which are subject to limitations applicable to nutrient limited watersheds.

(1) **Spiro Lake.** The nutrient limited watershed area for Spiro Lake is the entire watershed and drainage area of Spiro Lake, including all direct and indirect tributaries.

(2) **Clinton Lake.** The nutrient limited watershed area for Clinton Lake is the entire watershed and drainage area of Clinton Lake, including all direct and indirect tributaries.

(3) **Hobart Lake.** The nutrient limited watershed area for Hobart Lake is the entire watershed and drainage area of Hobart Lake, including all direct and indirect tributaries.

(4) **Lake Overholser.** The nutrient limited watershed area for Lake Overholser is the entire watershed and drainage area of Lake Overholser up to but not including Canton Reservoir, and includes direct and indirect tributaries in HUCs 11100301080 (excluding downstream from Lake Overholser), 11100301070, and 11100301060.

(5) **Lake Carl Etling.** The nutrient limited watershed area for Lake Carl Etling is the entire watershed and drainage area of Lake Carl Etling, including South Carrizo Creek and all direct and indirect tributaries.

(6) **Fort Gibson Reservoir.** The nutrient limited watershed area for Fort Gibson Reservoir is the entire watershed and drainage area of Fort Gibson Reservoir up to but not including Lake Hudson, and includes direct and indirect tributaries in HUCs 11070209120 (excluding downstream from Fort Gibson Reservoir), 11070209100, and 11070209090.

(7) **Spavinaw Lake.** The nutrient limited watershed area for Spavinaw Lake is the entire watershed and drainage area of Spavinaw Lake, including Spavinaw Creek and all direct and indirect tributaries.

(8) **Eucha Lake.** The nutrient limited watershed area for Eucha Lake is the entire watershed and drainage area of Eucha Lake, including Spavinaw Creek and Beaty Creek and Brush Creek and all direct and indirect tributaries.

(9) **Lake Claremore.** The nutrient limited watershed area for Lake Claremore is the entire watershed and drainage area of Lake Claremore, including all direct and indirect tributaries.

(10) **Hulah Reservoir.** The nutrient limited watershed area for Hulah Reservoir is the entire watershed and drainage area of Hulah Reservoir, including all direct and indirect tributaries in the HUC 11070106020.

(11) **Wister Reservoir.** The nutrient limited watershed area for Wister Reservoir is the entire watershed and drainage area of Wister Reservoir, including the Poteau River upstream from Wister Reservoir and all direct and indirect tributaries and Fourche Maline Creek and all direct and indirect tributaries.

(12) **Taylor (Marlow) Lake near Rush Springs.** The nutrient limited watershed area for Taylor Lake is the entire watershed and drainage area of Taylor Lake, including all direct and indirect tributaries.

(13) **Fort Cobb Lake.** The nutrient limited watershed area for Fort Cobb Lake is the entire watershed and drainage area of both Fort Cobb Lake and Crowder Lake, including all direct and indirect tributaries in the HUCs 11130302130 and 11130302120.

(14) **Vanderwork Lake.** The nutrient limited watershed area for Vanderwork Lake is the entire watershed and drainage area of Vanderwork Lake, including all direct and indirect tributaries.

(15) **Elk City Lake.** The nutrient limited watershed area for Elk City Lake is the entire watershed and drainage area of Elk City Lake, including all direct and indirect tributaries.

(16) **Ozzie Cobb Lake.** The nutrient limited watershed area for Ozzie Cobb Lake is the entire watershed and drainage area of Ozzie Cobb Lake, including Rock Creek and all direct and indirect tributaries.

(17) **Great Salt Plains Reservoir.** The nutrient limited watershed area for Great Salt Plains Reservoir is the entire watershed and drainage area of the Great Salt Plains Reservoir, including Clay Creek and the Salt Fork of the Arkansas River and all direct and indirect tributaries.

(18) **Fort Supply Reservoir.** The nutrient limited watershed area for Fort Supply Reservoir is the entire watershed and drainage area of Fort Supply Reservoir, including Wolf Creek and all direct and indirect tributaries.

(19) **Tenkiller Reservoir.** The nutrient limited watershed area for Tenkiller Reservoir is the entire watershed and drainage area of Tenkiller Reservoir, including the Illinois River and Caney Creek and all direct and indirect tributaries.

(20) **Lake Thunderbird.** The nutrient limited watershed area for Lake Thunderbird is the entire watershed and drainage area of Lake Thunderbird, including Little River above Lake Thunderbird and all direct and indirect tributaries.

(21) **Lake Chickasha.** The nutrient limited watershed area for Lake Chickasha is the entire watershed and drainage area of Lake Chickasha, including Stinking Creek and Spring Creek above Lake Chickasha and all direct and indirect tributaries.

SUBCHAPTER 7. GROUNDWATER QUALITY STANDARDS

252:730-7-1. Scope and applicability; purpose

(a) The provisions of this Subchapter apply only to fresh groundwater.

(b) The purposes of the rules in this Subchapter are to protect beneficial uses and classifications of groundwater, to assure that degradation of the existing quality of groundwater does not occur, and to provide minimum standards for remediation when groundwater becomes polluted by humans.

252:730-7-2. Groundwater quality antidegradation policy

(a) The groundwaters of the State of Oklahoma are an important and valuable resource that shall be maintained and protected.

(b) Beneficial uses shall be maintained and protected and human degradation of groundwater quality that would cause or contribute to the nonattainment of beneficial uses shall not be allowed.

(c) Whenever existing groundwater quality exceeds the level necessary for beneficial uses to be maintained and protected, the existing groundwater quality shall be maintained and protected, unless it is demonstrated to the State that any lowering of groundwater quality:

(1) After an analysis of alternatives, is necessary to accommodate important economic and social development and is in the public interest; and

(2) Protective measures sufficient to protect beneficial uses shall be maintained at all times.

(d) In certain groundwaters, whenever existing groundwater quality exceeds the level necessary for beneficial uses to be maintained and protected, the existing groundwater quality shall be maintained and protected. For special source groundwaters:

(1) Special source groundwaters are defined as groundwaters where exceptional water quality exists, where there is an irreplaceable source of water, where it is necessary to maintain an outstanding resource, or where the quality of the groundwater may be important for maintaining a uniquely designated characteristic of certain surface waters, as defined in A-D below:

(A) All groundwater likely to influence the quality of waters designated as a "Scenic River" in Appendix A of this Chapter and their watersheds; and

(B) All groundwater likely to influence the quality of waters located within the boundaries of the areas described in Appendix B of this Chapter; and

(C) All groundwater likely to influence the quality of waters designated as "HQW" in Appendix A of this Chapter; and

(D) All groundwater likely to influence the quality of waters located within the boundaries of a State approved source water protection area for public water supply.

(2) Groundwaters designated as special source groundwaters are prohibited from receiving any discrete discharge(s), surface water from constructed infiltration basins, or surface application of waste, unless the activity maintains or improves existing water quality.

(3) Discharges proximate and/or adjacent to special source groundwaters shall take into consideration the requirement to maintain or improve existing water quality in special source groundwaters and shall ensure that any activity provides for the maintenance or improvement of water quality in special source groundwaters.

252:730-7-3. Groundwater classifications, beneficial uses and vulnerability levels

(a) **Classifications.** Classification of all groundwater shall be designated as follows:

(1) **(Class I): RESERVED**

(2) **General Use Groundwater (Class II):** These are groundwaters which have good quality due to natural conditions and generally have a mean concentration of total dissolved solids of less than 3,000 milligrams per liter.

(3) **Limited Use Groundwater (Class III):** These are groundwaters which have poor quality due to natural conditions and generally have a mean concentration of total dissolved solids of greater than or equal to 3000 milligrams per liter but less than 5000 milligrams per liter.

(4) **Highly Mineralized Treatable Groundwater (Class IV):** These are groundwaters which have very poor quality due to natural conditions and generally have a mean concentration of total dissolved solids of greater than or equal to 5000 milligrams per liter but less than 10,000 milligrams per liter.

(b) **Beneficial uses.** This subsection lists the various beneficial uses of groundwater and designates certain beneficial uses for certain classifications of groundwater.

(1) **List of beneficial uses for groundwater.**

(A) **Public Water Supply.** The beneficial use designation of Public Water Supply refers to those groundwaters capable of delivering suitable quantities of groundwater for municipal consumption whether or not treatment is required.

(B) **Domestic Untreated Water Supply.** The beneficial use designation of Domestic Untreated Water Supply refers to those groundwaters capable of delivering suitable quantities of untreated groundwater for domestic consumption.

(C) **Agriculture.** The beneficial use designation of Agriculture refers to that groundwater which is or could be used for irrigation or livestock watering.

(D) **Industrial and Municipal Process and Cooling Water.** The beneficial use designation of Industrial and Municipal Process and Cooling Water refers to that groundwater that is or could be used for a municipal or industrial process or cooling function.

(2) **Beneficial use designations.**

(A) The beneficial uses for General Use Groundwater (Class II), not identified in Appendix H of this Chapter, shall be Domestic Untreated Water Supply, Public Water Supply, Agriculture, and Industrial and Municipal Process and Cooling Water.

(B) The beneficial uses for Limited Use Groundwater (Class III) and Highly Mineralized Treatable Groundwater (Class IV), not identified in Appendix H of this Chapter, shall be Agriculture and Industrial and Municipal Process and Cooling Water.

(C) The beneficial uses for any groundwater identified in Appendix H of this Chapter shall be as designated in that appendix.

(D) The beneficial use for groundwater which is used for water supply purposes on or after July 1, 2000, has a mean concentration of total dissolved solids of less than 5,000 milligrams per liter, and has not been determined by any state environmental agency to be not suitable for human consumption, shall be Public Water Supply and or Domestic Untreated Water Supply.

(E) A beneficial use designation for groundwater may be amended or removed only after a demonstration to the satisfaction of the Board that meets one of the following tests:

(i) The designated use does not exist due to a condition that was not caused by humans, and treatment using Best Available Technology will not achieve the designated use, or

(ii) The designated use does not exist due to a condition that is attributable to irreversible impacts caused by humans, and the remedy would cause substantial and widespread economic and social impact.

(F) Groundwater which has had a beneficial use designation amended or removed pursuant to (E) of this paragraph shall be identified in Appendix H of this Chapter.

(c) **Vulnerability level.** Groundwater in certain hydrogeologic basins is further classified according to its vulnerability to contamination as determined by DRASTIC. Such vulnerability levels of hydrogeologic basins shall be identified as Very Low, Low, Moderate, High, and Very High as prescribed in Table 1 of Appendix D of this Chapter. The vulnerability level may vary within each hydrogeologic basin, depending on site-specific hydrogeologic factors.

(d) **Nutrient-vulnerable groundwater.** Certain specified groundwaters shall be further subject to designation in Table 2 of Appendix D of this Chapter as nutrient-vulnerable groundwater.

252:730-7-4. Criteria for groundwater quality protection

(a) Groundwaters of the state support many different beneficial uses. The criteria below do not require improvement over naturally occurring background concentrations. When naturally occurring background concentrations exceed the criterion for a given parameter, the naturally occurring background concentration may be utilized as a criterion, if suitable. If a given parameter

has more than one criterion associated with it, the most stringent criteria shall apply to ensure beneficial use protection.

(b) The following criteria apply to all groundwaters for the protection of beneficial uses except those groundwaters specifically referenced in OAC 252:730-7-4(c).

(1) The groundwaters of the state shall be maintained to prevent alteration of their chemical properties by harmful substances not naturally found in groundwater.

(2) Protective measures adequate to preserve and protect background quality of the groundwater and existing and designated groundwater basin classifications shall be maintained at all times.

(3) Protective measures shall also be sufficient to minimize the impact of pollutants on groundwater quality.

(4) The concentration of any synthetic substance or any substance not naturally occurring in that location shall not exceed the PQL in an unpolluted groundwater sample using laboratory technology. If the concentration found in the test sample exceeds the PQL, or if other substances in the groundwater are found in concentrations greater than those found in background conditions, that groundwater shall be deemed to be polluted and corrective action may be required.

(c) For artificial aquifer recharge and or aquifer storage and recovery activities, the criteria below and presented in Tables 1 and 2 of Appendix I shall apply to ensure the protection of beneficial uses, as specified. Artificial recharge and or aquifer storage and recovery activities shall not cause or contribute to a condition of pollution or nuisance or result in nonattainment of any applicable groundwater quality standard.

(1) **Chemical Constituents.** Groundwaters shall not contain chemical constituents in concentrations that adversely affect any beneficial use. At a minimum, groundwaters with the designated beneficial uses of public water supply and domestic untreated water supply shall not contain concentrations of chemical constituents in excess of the maximum contaminant levels specified in the following provisions:

(A) Organic Contaminants in 40 C.F.R. 141.61(a)

(B) Synthetic Organic Contaminants in 40 C.F.R. 141.61(c)

(C) Inorganic Contaminants in 40 C.F.R. 141.62(b)

(D) Disinfection Byproducts in 40 C.F.R. 141.64

(E) Disinfectants in 40 C.F.R. 141.65(a)

(2) **Toxicity.** Groundwaters shall be maintained free of toxic substances in concentrations that produce detrimental physiological responses in human, plant, animal, or aquatic life associated with any beneficial use(s). This criterion applies regardless of whether the toxicity is caused by a single substance or the interactive effect of multiple substances or the mobilization and or transformation of a substance due to changes in physiochemical properties within the aquifer. At a minimum, groundwaters with the designated beneficial uses of public water supply and domestic untreated water supply shall not exceed limits specified in Table 1 of Appendix I of this chapter.

(3) **Secondary Contaminants.** At a minimum, groundwaters with the designated beneficial uses of public water supply and domestic untreated water supply shall not exceed the criteria limits presented in Table 2 of Appendix I of this chapter and consistent with 40 C.F.R. 143.3.

(4) **Microorganisms.** Groundwaters with the designated beneficial uses of public water supply and domestic untreated water supply microorganisms shall not exceed the limits specified in 40 C.F.R. 141.63 and 40 C.F.R. 141.70-73.

(5) **Taste and Odor.** Groundwaters shall be free from taste and odor producing substances, in concentrations that cause nuisance or adversely affect any beneficial use.

(6) **Radioactivity.** At a minimum, groundwaters with the designated beneficial uses of public water supply and domestic untreated water supply shall not contain concentrations of radionuclides in excess of limits specified in 40 C.F.R. 141.66.

(7) **Geochemical and Physical Composition.** The geochemical and physical composition of groundwaters shall not be altered such that mobilization of any introduced or in-situ contaminants, natural or non-natural, occurs and impairs any beneficial use.

(8) **Minerals.** Increased mineralization, in comparison to existing water quality, from elements such as, but not limited to, calcium, magnesium, sodium and their associated anions shall not impair any beneficial use.

(d) Measures to prevent noncompliance with this Section caused by any person, or activity, shall be the responsibility of each state environmental agency within their jurisdictional areas of environmental responsibility. Such measures shall be prescribed in the Water Quality Standards Implementation Plan of each such agency. When regulating activities that have the potential to contaminate groundwater from the surface, the vulnerability level of an affected hydrogeologic basin (for example, more stringent measures such as siting limitations, lagoon liners, or additional monitoring wells may be required to protect groundwater in hydrogeologic basins with High or Very High vulnerability levels) shall be considered. When regulating groundwater quality activities that have the potential to cause or contribute to impairment of a surface water beneficial use, provisions to prevent the impairment of any surface water beneficial use shall be included.

252:730-7-5. Corrective action

(a) Groundwater that has been polluted as a result of human activities shall be restored to a quality that will support the beneficial uses designated in OAC 252:730-7-3 for that groundwater, or as otherwise specified in a site-specific remediation plan approved by an agency of competent jurisdiction.

(b) Measures to remedy, control or abate groundwater pollution caused by any person shall be the responsibility of each state environmental agency within its jurisdictional areas. Such measures shall be prescribed in the Water Quality Standards Implementation Plan of each such agency. When regulating activities that have the potential to contaminate groundwater from the surface, state environmental agencies shall consider the vulnerability level of an affected hydrogeologic basin (for example, more stringent measures such as siting limitations, lagoon liners, or additional monitoring wells may be required to protect groundwater in hydrogeologic basins with High or Very High vulnerability levels).

APPENDIX A. DESIGNATED BENEFICIAL USES OF SURFACE WATERS [NEW]

(a) **Introduction.** The Tables in the following Appendices A.1 through A.7 identify certain waterbodies throughout the state of Oklahoma and designate beneficial uses for those waterbodies. The waterbodies are identified by their name (e.g., "Horse Creek") or other description (e.g., "Tributary of Lebos Creek at Sec. 2, T2N, R 26W, IM", "Red River from the Arkansas State Line to the Kiamichi River") and a Waterbody ID Number. The Waterbody ID numbers are used in the State of Oklahoma "Water Quality Assessment Integrated Report" published by the Oklahoma Department of Environmental Quality. The first digit of the Waterbody ID number indicates the basin number; the next three digits indicate the major drainage segment within that basin; the next two digits indicate the subdivision of the major drainage segment, the next two digits indicate a smaller section of that six digit basin, and the last four digits represent a hydrologic sequence of waterbodies, going from the most downstream point in the eight-digit watershed up to the furthest upstream point in the watershed. In some cases, two additional digits are added to indicate further delineations within the waterbody segment. Not all waterbodies have a Waterbody ID number, primarily due to limited resources and need. Where a specific Waterbody ID has not been assigned, the six-digit Water Quality Management Segment is listed until such time as the waterbody is assigned a specific Waterbody ID number. The Tables in Appendices A.1 through A.7 also set forth columns to show the beneficial uses or subcategories of uses which are designated for each identified waterbody.

(b) **Beneficial Use Designations.** Designations of beneficial uses for a waterbody are reflected in the Tables in Appendices A.1 through A.7 by the presence of the following codes or a dot ("•") in the columns to the right of the waterbody name. An empty space in a column means that column's beneficial use or subcategory thereof is not designated for that waterbody.

- (1) **EWS** - Emergency Water Supply beneficial use
- (2) **PPWS** - Public and Private Water Supply beneficial use
- (3) **F&W Prop** - Fish and Wildlife Propagation beneficial use
 - (A) **WWAC** - Warm Water Aquatic Community subcategory
 - (B) **HLAC** - Habitat Limited Aquatic Community subcategory
 - (C) **CWAC** - Cool Water Aquatic Community subcategory
 - (D) **Trout** - Trout Fishery (put and take) subcategory
- (4) **Ag** - Agriculture beneficial use
- (5) **Rec** - Recreation beneficial use
 - (A) **PBCR** - Primary Body Contact beneficial use
 - (B) **SBCR** - Secondary Body Contact beneficial use
- (6) **Nav** - Navigation beneficial use
- (7) **Aes** - Aesthetics beneficial use

A dot ("•") used in a column indicates that the beneficial use in that column's heading is designated for that waterbody without a more specific subcategory or other designation.

The criteria to protect the beneficial uses are provided in Subchapter 5 and Appendix G of this Chapter.

(c) **Limitations for Additional Protection.**

- (1) Limitations for additional protection are described in OAC 252:730-5-25.
- (2) Waterbodies that are subject to limitations for additional protection in OAC 252:730-5-25 are identified by the designation of any of the following codes in the "Limitations" column to the right of the waterbody's name:
 - (A) **"ORW"** - indicates waters designated Outstanding Resource Waters;
 - (B) **"HQW"** - indicates waters designated High Quality Waters; and

(C) "**SWS**" - indicates waters designated Sensitive Public and Private Water Supplies.

(D) "**SWS-R**" means waterbodies classified as sensitive public and private water supplies that may be augmented with reclaimed municipal water for the purpose of indirect potable reuse.

(d) **Remarks used in Appendices A.1 through A.7.** The presence of any of the following footnotes in the "Remarks" column to the right of a waterbody's name denotes special circumstances which are applicable to that waterbody.

(1) A footnote (1) excludes the Scenic River designation from that portion of Lee Creek necessary for a dam to be built in the State of Arkansas with a crest elevation of no more than the 420 foot MSL elevation according to plans, specifications and conditions contained in U.S. Army Corps of Engineer Permit WD-050-03-3541 and in the Federal Energy Regulatory Commission License for Project No. 5251-002, which were approved by the U.S. Environmental Protection Agency. Changes in water quality caused by the impoundment of water by said dam shall not constitute a violation of Oklahoma's Water Quality Standards.

(2) The remark "CSW" designates those waters identified as Culturally Significant Waters.

(3) The remark "NLW" designates a nutrient-limited watershed. Specific delineations of nutrient-limited watersheds are provided in OAC_252:730-5-29.

(4) A footnote (4) designates those streams for which further investigations are pending. Beneficial use designations for those streams are provided in Subchapter 5 of this Chapter.

APPENDIX A.1
Designated Beneficial Uses of Surface Waters
Water Quality Management Basin 1, Middle Arkansas River

APPENDIX B. AREAS WITH WATERS OF RECREATIONAL AND/OR ECOLOGICAL SIGNIFICANCE [NEW]

The following tables list National and State parks, National forests, wildlife areas, wildlife management areas, wildlife refuges (Table 1) and areas which contain federally listed threatened or endangered species pursuant to the Federal Endangered Species Act (Table 2).

TABLE 1 - National and State Parks, National Forests, Wildlife Areas, Wildlife Management Areas, and Wildlife Refuges

PROTECTED AREA / WATER	WQM Segment
Adair State Park	121700
Alabaster Caverns State Park	620920
Altus-Lugert Wildlife Management Area	311510
Arrowhead State Park	220600
Atoka Wildlife Management Area	410400
Beaver River Wildlife Management Area	720500
Beaver State Park	720500
Beavers Bend Resort State Park	410200
Black Kettle National Grasslands	310840
Black Kettle Wildlife Management Area	310840
Black Mesa State Park/Preserve	720900
Blue River Wildlife Management Area	310800
Boggy Depot State Park	410400
Boiling Springs State Park	720500
Boswell State Park	410400
Broken Bow Wildlife Management Area	410210
Brushy Lake State Park	220200
Candy Creek Wildlife Management Area	121300
Canton Wildlife Management Area	720500
Cherokee State Parks I, II, III	121600
Cherokee Landing State Park	121700
Cherokee Wildlife Management Area	120400
Chickasaw National Recreation Area	310800
Chouteau Wildlife Management Area	121500
Cimarron Bluff Wildlife Management Area	620920
Cimarron Hills Wildlife Management Area	620920
Clayton Lake State Park	410300
Cookson Hills Wildlife Management Area	220200
Cooper Wildlife Management Area	720500
Copan Wildlife Management Area	121400
Cross Timbers Wildlife Management Area	311100

PROTECTED AREA / WATER	WQM Segment
Crowder Lake State Park	310830
Deep Fork National Wildlife Refuge	520700
Deep Fork Wildlife Management Area	520700
Disney/Little Blue State Parks	121600
Dripping Springs State Park (Okmulgee)	520700
Drummond Flats Wildlife Management Area	620910
Ellis Co. Wildlife Management Area	520600
Eufaula Wildlife Management Area	520500 520700 220600
Five Civilized Tribes State Park	121600
Fobb Bottom Wildlife Management Area	311100
Fort Cobb State Park	310830
Fort Cobb Wildlife Management Area	310830
Fort Gibson Wildlife Management Area	121600
Fort Supply Wildlife Management Area	720500
Foss State Park	310830
Gary Sherrer Wildlife Management Area	410310
Grady County Wildlife Management Area	310810
Great Plains State Park	621010
Great Salt Plains State Park	621010
Greenleaf State Park	120400
(Camp) Gruber Training Center	120400
Hackberry Flat Wildlife Management Area	311310
Heavener Runestone State Park	220100
Heyburn Wildlife Management Area	120400
Hickory Creek Wildlife Management Area	311100
Honobia Creek Wildlife Management Area	410210
Hugo Lake State Park	410300
Hugo Wildlife Management Area	410300
Hulah Wildlife Management Area	121400
James M. Collins Wildlife Management Area	220600
John Dahl Wildlife Management Area	621200
Kaw Wildlife Management Area	621210
Keystone State Park	620900
Keystone Wildlife Management Area	620900 621200
Lake Eucha State Park	121600
Lake Eufaula State Park	520700
Lake Murray State Park	311100

PROTECTED AREA / WATER	WQM Segment
Lake Texoma State Park	310000
Lake Wister State Park	220100
Lexington Wildlife Management Area	520600
Little River National Wildlife Refuge	410200
Little River State Park	520810
Little Sahara State Park	620920
Love Valley Wildlife Management Area	311100
McCurtain Co. Wilderness Area	410210
McGee Creek State Park	410400
McGee Creek Wildlife Management Area	410400
Mountain Park Wildlife Management Area	311500
Natural Falls State Park	121700
North Grand Lake State Park	121600
Okmulgee State Park	520700
Okmulgee Wildlife Management Area	520700
Oologah Wildlife Management Area	121510
Optima National Wildlife Refuge	720510
Optima Wildlife Management Area	720510
Osage Hills State Park	121400
Osage-Western Wall Rock Creek Wildlife Management Area	121400
Ouachita National Forest	410210
	410310
	220100
Ouachita Wildlife Management Area	220100
Ozark Plateau Wildlife Management Area	220200
Ozark Plateau National Wildlife Refuge	220200
Packsaddle Wildlife Management Area	520620
Pine Creek Wildlife Management Area	410201
Pushmataha Wildlife Management Area	410300
Quartz Mountain State Resort Park	311510
Raymond Gary State Park	410300
Red Rock Canyon State Park	310830
Redbud Valley Conservancy Area	121300
Rita Blanca National Grasslands	720510
Robbers Cave State Park	220100
Robbers Cave Wildlife Management Area	220100
Robert S. Kerr State Wildlife Management Area	220200
Roman Nose State Park	620910
Sandy Sanders Wildlife Management Area	311800

PROTECTED AREA / WATER	WQM Segment
Sequoyah National Wildlife Refuge	220200
Sequoyah State Park/Western Hills Resort Park	121600
Sheppard Point Recreational Area	120400
Shorb Wildlife Management Area	720500
Skiatook Wildlife Management Area	121300
Snowdale State Park	121600
Spavinaw State Park	121600
Spavinaw Hills Wildlife Management Area	121600
Sparrow Hawk Wildlife Management Area	121700
Spiro Mound State Park	220200
Stinchcomb Wildlife Refuge	520520
Stringtown Wildlife Management Area	410400
Sutton Wilderness Area	520810
Talimena State Park	410310
Tenkiller State Park	121700
Tenkiller Wildlife Management Area	121700
Texoma/Washita Arm Wildlife Management Area	310800
Three Rivers Wildlife Management Area	410210
Tishomingo National Wildlife Refuge	310800
Tishomingo Wildlife Management Unit	310800
Turkey Creek Recreational Area	410210
Wahshashe State Park	121400
Walnut Creek State Park	621200
Washita National Wildlife Refuge	310840
Waurika Wildlife Management Area	311210
Webbers Falls Wildlife Management Area	120400
Wichita Mountains National Wildlife Refuge	311310 311500
Yourman Wildlife Management Area	220600

Table 2 - Areas which contain federally listed Threatened (T) or Endangered (E) Species pursuant to the Federal Endangered Species Act (ESA)

PROTECTED AREA / WATER	WQM SEGMENT	FEDERALLY-LISTED SPECIES under the ESA
Black Fork Creek in Pushmataha County from its junction with Little River, upstream to Oklahoma Highway 144 crossing-	410210	Leopard Darter (T)
Canadian River, main channel from the state line in Ellis and Roger Mills Counties, downstream to the Indian Nation Turnpike bridge west, of Eufaula Reservoir	220600 520600 520610 520620	Arkansas River Shiner (T), including critical habitat
Cimarron River, main channel west of I-35 crossing in Logan County, upstream to the state line and including the portion in northern Beaver and Harper counties	620910 620920	Arkansas River Shiner (T), including critical habitat
East Fork of Glover River, main channel in McCurtain County from its junction with the West Fork of Glover River, upstream to 4 air miles north-northeast of the community of Bethel in Section 5, T 2 S, R 24 EIM	410210	Leopard Darter (T), including critical habitat
Glover River, main channel in McCurtain County from Oklahoma Highway 3 crossing, upstream to the junction of the East Fork and West Fork of Glover River	410210	Leopard Darter (T), including critical habitat
Kiamichi River above Hugo Reservoir	410300	Scaleshell Mussel (E), Ouachita Rock Pocketbook mussel (E)
Little River, main channel in Pushmataha County from the mouth to of Cloudy Creek, upstream to the Pushmataha County Line	410210	Leopard Darter (T), including critical habitat; Ouachita Rock Pocketbook mussel (E); Rabbitsfoot mussel (T)
Little River below Pine Creek Reservoir	410200 410210	Ouachita Rock Pocketbook mussel (E); Rabbitsfoot mussel (T), including critical habitat; Winged Mapleleaf mussel (E)
Mountain Fork Creek (River), main channel in McCurtain County from mouth of Boktuklo Creek 6 air miles south-southwest of Smithville, upstream to the Oklahoma-Arkansas State line	410210	Leopard Darter (T), including critical habitat; Scaleshell Mussel (E)

PROTECTED AREA / WATER	WQM SEGMENT	FEDERALLY-LISTED SPECIES under the ESA
Neosho (Grand) River above Miami	121600	Neosho Madtom (T), Neosho Mucket mussel (E)
Salt Plains National Wildlife Refuge	621010	Whooping Crane (E), including critical habitat
West Fork of Glover River, main channel in-McCurtain County from its junction with the East Fork of Glover River, upstream to the community of Battiest	410210	Leopard Darter (T), including critical habitat
Verdigris River below Oologah Reservoir, downstream to Highway 266, Rogers County	121500	Rabbitsfoot mussel (T), including critical habitat
Illinois River, from Oklahoma-Arkansas State line, downstream to Barren Fork	121700	Neosho Mucket mussel (E), including critical habitat; Rabbitsfoot mussel (T)
Elk River, from Oklahoma-Arkansas State line, west to Buffalo Creek	121600	Neosho Mucket mussel (E), including critical habitat

APPENDIX C. [RESERVED] [NEW]

APPENDIX D. CLASSIFICATIONS FOR GROUNDWATER IN OKLAHOMA [NEW]

(a) **Vulnerability Levels of Hydrogeologic Basins.** Identification of vulnerability levels of hydrogeologic basins shall be as set forth in Table 1 of this Appendix. The boundaries of such hydrogeologic basins shall be as defined in the Oklahoma Water Resources Board publication number 99-1 entitled "Statewide Groundwater Vulnerability Map of Oklahoma".

(b) **Designations of "Nutrient-Vulnerable Groundwater".** Additional designations of certain hydrogeologic basins of groundwater as "nutrient-vulnerable groundwater" shall be as set forth in Table 2 of this Appendix. The boundaries of such "nutrient-vulnerable groundwater" hydrogeologic basins shall be as defined in the Oklahoma Water Resources Board publication number 99-1 entitled "Statewide Groundwater Vulnerability Map of Oklahoma".

Table 1. Identification of Vulnerability Levels of Hydrogeologic Basins

NAME OF HYDROGEOLOGIC BASIN		VULNERABILITY LEVEL
Alluvium and Terrace Deposits	of the North Fork of the Red River	Very High
	of the Salt Fork of the Arkansas River	Very High
	of the Red River	Very High
	of the Washita River	Very High
	Enid Isolated Terrace	Very High
	Canadian River	Very High
	of the Arkansas River	Very High
	of the Cimarron River	Very High
	of the North Canadian River	Very High
	Gerty Sand	High
	all other alluvium and terrace deposits	High-Very High
Bedrock	Boone	High
	Arbuckle-Simpson	High
	Blaine	High
	Elk City	High
	Cedar Hills	Moderate
	Antlers	Moderate
	Arbuckle-Timbered Hills	Moderate
	Arkansas Novaculite	Moderate
	Rush Springs	Moderate
	Vamoosa-Ada	Moderate
	Central Oklahoma	Moderate
	Ouachita Mountains	Low
	Ogallala	Low
	Cretaceous	Low
	Permian	Low
	Pennsylvanian	Low
	Mesozoic	Very Low
	Tishomingo Granite	Very Low
	Washita Igneous	Very Low

The vulnerability level may vary within each hydrogeologic basin, depending on site-specific hydrogeologic factors.

Table 2. Designations of Nutrient-Vulnerable Groundwater

NAME OF HYDROGEOLOGIC BASIN		VULNERABILITY LEVEL
Alluvium and Terrace Deposits	of the North Fork of the Red River	Very High
	of the Salt Fork of the Arkansas River	Very High
	of the Red River	Very High
	of the Washita River	Very High
	Enid Isolated Terrace	Very High
	Canadian River	Very High
	of the Arkansas River	Very High
	of the Cimarron River	Very High
	of the North Canadian River	Very High
	Gerty Sand	High
	all other alluvium and terrace deposits	High-Very High
Bedrock	Boone	High
	Arbuckle-Simpson	High
	Blaine	High
	Elk City	High

APPENDIX E. REQUIREMENTS FOR DEVELOPMENT OF SITE-SPECIFIC CRITERIA FOR CERTAIN PARAMETERS [NEW]

A. General Applicability to Metals

Numerical criteria for metals to protect aquatic life are referenced in OAC 252:730-5-12(f)(6)(G) and Table 2 of Appendix G of this Chapter. For permitting purposes, such criteria for total recoverable Arsenic, Cadmium, Chromium, Copper, Lead, Mercury, Nickel, Silver, and Zinc may be translated into dissolved metals criteria using the conversion factors referenced in OAC 252:730-5-12(f)(6)(H) and Table 3 of Appendix G. Criteria for parameters other than metals are also located in Table 2 of Appendix G.

An additional alternative which may be utilized for permitting purposes is to determine site-specific criteria from either the total recoverable or the dissolved criteria. However, federal regulations found at 40 C.F.R. 122.45(c) require that NPDES permit limits must express metals concentrations as total recoverable, not dissolved. Therefore, if dissolved criteria for metals are implemented, they must be translated to site-specific total metals criteria to be used in the issuance of permit limits consistent with OAC 252:740.

The permitting authority may issue a total recoverable permit limit if statewide total recoverable criteria are appropriate in the permitting authority's view, and/or satisfactory in the permittee's view. If permit limits obtained using total recoverable criteria are unsatisfactory to the permittee, the permittee may attempt to obtain different permit limits by developing site-specific criteria in accordance with the provisions of this Appendix.

Implementation of site-specific criteria may reduce the margin of safety afforded by implementation of criteria per OAC 252:730-5-12(f)(6)(G) and Table 2 of Appendix G. Therefore, it is important that background concentration (which reduces the assimilation capacity of receiving water) be accounted for when site-specific criteria are implemented. Determination of background concentration requires a minimum of twelve samples collected over twelve months.

In order to develop permissible site-specific criteria, this Appendix must be followed to the satisfaction of the permitting authority and DEQ. A work plan explaining sampling and analysis procedures and quality assurance/quality control must be approved by DEQ prior to commencing the site-specific study. Upon completion, results must be submitted to DEQ and the permitting authority. Permittees are strongly encouraged to evaluate both the discharge and receiving water using clean sampling techniques.

Upon DEQ approval, site-specific criteria shall be promulgated as part of this Appendix following the next subsequent permanent rulemaking to amend OAC 252:730. These site-specific criteria supersede other numeric criteria promulgated elsewhere in this chapter if it is shown to the satisfaction of DEQ that properties of the discharge or the circumstances surrounding the development of the site-specific criteria have not significantly changed since the promulgation of those site-specific criteria. Such criteria and the conditions around which they were derived, including but not limited to local environmental factors and effluent characteristics, shall be re-evaluated by the permit holder with each subsequent discharge permit renewal application or major

modification request to determine if any significant changes have affected the propriety of the site-specific criteria.

B. Site-Specific Criteria Applicability for NPDES Permit Activities

Oklahoma's site-specific criteria, except as otherwise specified, apply where the maximum concentration on the chronic regulatory mixing zone boundary occurs under critical conditions for receiving streams where $Q^* > 0.1823$ and on the acute regulatory mixing zone boundary for streams where $Q^* \leq 0.1823$. Critical conditions include regulatory effluent and receiving stream flows. OAC 252:740-5-2(C) requires that effluent flow, Q_e , be the highest monthly averaged discharge if sufficient data is available or the design flow otherwise. When chronic criteria implementation is appropriate, OAC 252:730-5-4 requires that the receiving stream flow, Q_u , be the larger of $7Q_2$ or 1 cfs. One cfs shall be used if the $7Q_2$ cannot be determined. The discharger shall be required to determine the $7Q_2$ per OAC 252:740-1-6 prior to the next permit cycle at which time the permit limits may be revised using the newly calculated Q_u (252:740-1-6(d)).

The maximum concentration on the mixing zone boundary may be simulated by mixing effluent and receiving water. Percent effluent in receiving water, PE, depends upon the dilution capacity of the stream and shall not exceed 100%. Dilution capacity, for streams, is represented as $Q^* = Q_e / Q_u$.

The following formulas shall be used to determine PE for receiving streams:

For streams with large dilution capacities ($Q^* < \text{or equal to } 0.1823$), PE equals $(194Q^*)$ divided by $(1 + Q^*)$. PE for $Q^* < \text{or equal to } 0.1823$ shall not be less than 10%.

For streams with intermediate dilution capacities ($0.1823 < Q^* < 0.3333$), PE equals (100) divided by $(6.17 - 15.51Q^*)$.

For streams with small dilution capacities ($Q^* > \text{or equal to } 0.3333$), PE equals 100%.

Site-specific criteria in Oklahoma lakes are also based on the maximum concentration on the mixing zone boundary. The following formulas shall be used to determine PE for lakes:

PE equals $4.96D$, $D > \text{or equal to } 3$ feet where D is pipe diameter.

PE equals $23.8W$, $W > \text{or equal to } 3$ feet where W is canal width.

As with streams, PE is always less than or equal to 100% for lakes.

If PE is calculated to be less than 10%, then effluent water effect ratios shall use $PE = 10\%$.

"Waterbody-specific" criteria, such as segment-specific metals, may not have limitations on its applicability. Rather, it may be used a substitute for other applicable statewide criteria for the entire waterbody.

Site-specific criteria are dependent, in part, on specific properties of the effluent that influence the bioavailability and toxicity of metals. Substantial changes in the quality or quantity of the effluent may affect the resulting site-specific criterion. Therefore, if the existing permit contains requirements for toxicity reduction evaluations (TREs) or pollution prevention efforts, a site-specific criterion should not be developed until after these efforts have been completed. A new site-specific criteria study would likely have to be performed after those requirements are met because the characteristics of the effluent may significantly change (e.g., hardness, pH, TDS). In cases where the quality or quantity of an effluent changes, the burden rests on the permittee to demonstrate that the effluent characteristics are not significantly altered to a degree that would affect the validity of the outcomes of the original site-specific criteria study. A site-specific criterion may need to be re-evaluated periodically to reflect changes in the system that may alter the characteristics of either the receiving water or effluent.

C. Site-Specific Criteria Applicability for Activities Not Related to NPDES Permits

In certain circumstances, statewide numeric criteria for parameters other than metals may be replaced by segment-specific criteria for specific parameters applicable to just one waterbody. These criteria will be applicable to any point in the waterbody. These criteria must be shown to be protective of native aquatic life through procedures similar to those used in the WER procedures detailed here and in DEQ approved technical guidance.

Development of segment-specific criteria for minerals should follow DEQ approved technical guidance. Certain cases may require additional data or justification, but this document should provide sufficient basic guidance for the development of alternative criteria. Development of site-specific or segment-specific criteria for parameters for other than metals or minerals and lacking specific guidance documents will require extensive coordination with technical staff from DEQ and the permitting authority.

D. Sampling Procedures

General guidance for field sampling can be found in DEQ approved technical guidance. The permittee shall collect both receiving water and effluent, and mix them together to obtain PE. Ambient water collections shall be representative of low stream flow events and collected at a location unaffected by the discharge being permitted. Twenty-four (24) hour composite effluent samples representative of normal operation shall be collected at the outfall such that any periodic toxic discharges are captured and average effluent conditions are represented. Outfalls may be combined proportional to flow if in close proximity. Clean sampling techniques shall be used where possible and samples shall be analyzed by an Oklahoma certified laboratory utilizing generally accepted methods. Dilution water must be made in accordance with approved methods. The pH, hardness, conductivity and alkalinity must be similar to that of the receiving water.

Site-specific criteria development for lakes should employ DEQ approved sampling procedures. Deviation from approved procedures and techniques must be justified to DEQ and the permitting authority prior to initiation of the sampling. Excursions from these techniques that occur as a result of on-site conditions must be reported to DEQ and the permitting authority as soon as possible. Implications of these deviations on the data quality and their appropriateness to the outcomes of

the study must be reviewed and agreed upon by DEQ and the permitting authority prior to their use in the derivation of any criteria.

For systems lacking NPDES permitted dischargers, sampling procedures for determining background concentration should follow DEQ approved technical guidance for characterizing local conditions.

E. Site-Specific Criteria Development Options for Metals:

Prior to the initiation of any work toward development of a site-specific criterion, interested parties must coordinate with DEQ technical staff. Such coordination will require, at a minimum, a workplan addressing project goals, collection and testing methods, quality assurance measures, and output schedules. This workplan will need to be reviewed and approved by DEQ and the permitting authority prior to initiation of any work.

Three options are available if the permittee decides to develop site-specific metals criteria for permitting purposes instead of utilizing the total recoverable criteria referenced in OAC 252:730-5-12(f)(6)(G) and Table 2 of Appendix G.

1. Option 1: Water Effects Ratio (WER)

The permittee may obtain a site-specific water effects ratio (WER) to translate a state wide total criterion to a site-specific total criterion if the existing permit does not contain requirements for toxicity reduction evaluations or implementation of pollution prevention efforts. Toxicity tests using both laboratory dilution water and PE water must be performed. PE water is obtained by first determining the amount of water required for the toxicity test (e.g. 1L). Since $PE = 100V_e / (V_e + V_r)$, where V_e and V_r are volumes of effluent and receiving water required for the toxicity test, respectively, then $V_e = PE/100$ (L). If $PE = 25\%$, then $V_e = 0.25L$. Given that $V_e + V_r = 1$ (L) in this example, $V_r = 1 - PE/100$, or $0.75L$.

Toxicity tests using two different species are required. Acute 48-hour static renewal definitive toxicity tests shall be performed by the permittee in accordance with approved methods for acute testing identified above. LC_{50} tests shall be used to determine WER's for both acute and chronic criteria. Toxicity tests require adding metal to both PE and dilution water. It shall not be acceptable to estimate metal concentrations by measuring the amount added. Total recoverable concentrations must be used to obtain LC_{50} 's for both test species for PE and laboratory water in Option 1.

Multiple WER's must be performed. At a minimum, three tests in three different seasons must be performed for two test species. WER is computed as $LC_{50\text{dilution}}/LC_{50\text{PE}}$. A geometric mean of the WER's is the final water effect ratio, FWER. A minimum of four WER's must be used in the computation of FWER. An explanation of any WER's obtained but not used in computation of FWER must be provided to the permitting authority and DEQ. The total criterion specified in Table 2 of Appendix G is divided by FWER to obtain a site-specific total criterion. Background concentration must be determined to use with the site-specific criterion to develop permit limits.

2. Option 2: Dissolved to Total Fraction

Dissolved and total recoverable concentrations must be obtained to determine a dissolved to total fraction. Samples must be taken from the effluent, receiving water and PE water. The dissolved to total fraction must be successfully computed a minimum of ten times.

The dissolved to total fraction is defined as $f_i = C_{Di}/C_{Ti}$, where C_{Di} is the dissolved concentration in the i th PE sample, and C_{Ti} is the total recoverable concentration. The dissolved fraction for the site shall be determined as the geometric mean for the n samples.

$$\therefore f = \exp \left[\sum_{i=1}^n [\ln(f_i)]/n \right]$$

To develop a site-specific criterion from the dissolved fraction alone, divide the dissolved criterion determined from Table 3 of Appendix G by f . The result is a site-specific total recoverable criterion.

3. Option 3: Combining f and FWER

The most definitive method of developing a site-specific criterion is to modify a dissolved criterion to account for both the fraction of the concentration biologically available and the difference between the toxicity of the metal in the laboratory dilution water and in PE water. In order to perform option 3, WER's must be obtained using dissolved concentrations. This accounts for differences between the toxicity of the dissolved metal in laboratory dilution water and dissolved metal in PE water.

A translator, T , is obtained as the product of f and dissolved FWER. T is divided into the dissolved criterion determined from Table 3 of Appendix G to obtain a site-specific total recoverable criterion.

F. Site-Specific Criteria for Metals Which Have Been Developed for Particular Waterbodies

Subsequent to the initial promulgation of this Appendix, there have been cases in which interested persons have developed site-specific criteria for particular discharges or other circumstances in accordance with this Appendix. Such site-specific criteria are set forth below. These site-specific criteria shall be interpreted according to the following:

- C_{ast} = acute statewide total criterion
- C_{cst} = chronic statewide total criterion
- C_{asd} = acute statewide dissolved criterion
- C_{csd} = chronic statewide dissolved criterion
- S_{ast} = acute site-specific total criterion
- S_{cst} = chronic site-specific total criterion

FWER_t = final total water effects ratio
FWER_d = final dissolved water effect ratio
f = dissolved to total fraction

Acute site-specific criteria are appropriate for large streams and chronic site-specific criteria are appropriate for small and medium size streams.

Options Allowed In Appendix E:

Option 1
 $S_{ast} = C_{ast}/FWER_t$
 $S_{cst} = C_{cst}/FWER_t$

Option 2
 $S_{ast} = C_{csd}/f$
 $S_{cst} = C_{csd}/f$

Option 3
 $S_{ast} = C_{csd}/(fxFWER_d)$
 $S_{cst} = C_{csd}/(fxFWER_d)$

1. City of Blackwell Discharge to Chikaskia River: Cadmium

A site-specific criteria modification study has been satisfactorily completed for cadmium for the City of Blackwell.

$$\begin{aligned}FWER_t &= 0.0989 \\FWER_d &= 0.2905 \\f &= 0.18\end{aligned}$$

The results of the study allow any of the four following criteria to be utilized.

$C_{cst} = 0.51 \mu\text{g/L}$	Statewide criterion
$S_{cst} = 5.1 \mu\text{g/L}$	Option 1
$S_{cst} = 2.45 \mu\text{g/L}$	Option 2
$S_{cst} = 8.45 \mu\text{g/L}$	Option 3

The discharger may choose the above criterion it wishes to use for discharge permit calculations.

2. AES Shady Point Discharge to Poteau River: Copper

A site-specific criteria modification study has been satisfactorily completed for copper for AES Shady Point.

$$FWER_t = 0.0876$$

$$FWER_d = 0.1306$$

$$f = 0.5936$$

The results of the study allow any of the four following criteria to be utilized.

$C_{cst} = 9.50 \mu\text{g/L}$	Statewide criterion
$S_{cst} = 65 \mu\text{g/L}$	Option 1
$S_{cst} = 15.3 \mu\text{g/L}$	Option 2
$S_{cst} = 74 \mu\text{g/L}$	Option 3

The discharger may choose the above criterion it wishes to use for discharge permit calculations.

3. City of Idabel Discharge to Mud Creek at SW 1/4 of SW 1/4 of SW 1/4 of Section 15, T 8 S, R 24 EIM, McCurtain County, Oklahoma (Latitude 33° 51' 14.621" North, Longitude 94° 47' 22.200" West)

A. Lead

A site-specific criteria modification study has been satisfactorily completed for lead for the City of Idabel.

$$FWER_t = 2.5912$$

$$FWER_d = 0.2914$$

$$f = 0.7157$$

The results of the study allow any of the four following criteria to be utilized.

$C_{cst} = 2.3492 \mu\text{g/L}$	Statewide criterion
$S_{cst} = 0.9066 \mu\text{g/L}$	Option 1
$S_{cst} = 2.7104 \mu\text{g/L}$	Option 2
$S_{cst} = 9.3036 \mu\text{g/L}$	Option 3

The discharger may choose the above criterion it wishes to use for discharge permit calculations.

B. Nickel

A site-specific criteria modification study has been satisfactorily completed for nickel for the City of Idabel.

$$FWER_t = 1.1244$$

$$\text{FWER}_d = 0.9735$$

$$f = 0.5798$$

The results of the study allow any of the four following criteria to be utilized.

$C_{\text{cst}} = 46.82 \mu\text{g/L}$	Statewide criterion
$S_{\text{cst}} = 41.6 \mu\text{g/L}$	Option 1
$S_{\text{cst}} = 80.50 \mu\text{g/L}$	Option 2
$S_{\text{cst}} = 82.69 \mu\text{g/L}$	Option 3

The discharger may choose the above criterion it wishes to use for discharge permit calculations.

C. Zinc

A site-specific criteria modification study has been satisfactorily completed for zinc for the City of Idabel.

$$\text{FWER}_t = 0.6714$$

$$\text{FWER}_d = 0.7178$$

$$f = 0.6213$$

The results of the study allow any of the four following criteria to be utilized.

$C_{\text{ast}} = 107.52 \mu\text{g/L}$	Statewide criterion
$S_{\text{ast}} = 160.14 \mu\text{g/L}$	Option 1
$S_{\text{ast}} = 169.24 \mu\text{g/L}$	Option 2
$S_{\text{ast}} = 235.78 \mu\text{g/L}$	Option 3

The discharger may choose the above criterion it wishes to use for discharge permit calculations.

D. Copper

A site-specific criteria modification study has been satisfactorily completed for copper for the City of Idabel discharge to Mud Creek. All criteria are calculated at an in-stream hardness of 32.00 mg/L. **[Effective as state water quality criteria only; not effective for Clean Water Act programs.]**

$$\text{FWER}_t = 0.1409$$

$$\text{FWER}_d = 0.1541$$

$$f = 0.7527$$

The results of the study allow any of the four following criteria to be utilized.

Ccst = 4.83 µg/L	Statewide criterion
Scst = 31.34 µg/L	Option 1
Scst = 6.16 µg/L	Option 2
Scst = 39.97 µg/L	Option 3

Cast = 6.56 µg/L	Statewide criterion
Sast = 42.56 µg/L	Option 1
Sast = 8.37 µg/L	Option 2
Sast = 54.28 µg/L	Option 3

The discharger may choose the above criterion it wishes to use for discharge permit calculations.

4. Oklahoma Gas & Electric Mustang Generating Station Discharge to North Canadian River at NE 1/4 of NE 1/4 of SE 1/4 of Section 36, T 12 N, R 5 WIM, Canadian County, Oklahoma: Copper

A site-specific criteria modification study has been satisfactorily completed for copper for the Oklahoma Gas & Electric Mustang Generating Station discharge to the North Canadian River.

$$\begin{aligned} \text{FWER}_t &= 0.053 \\ \text{FWER}_d &= 0.224 \\ f &= 0.368 \text{ (0.37)} \end{aligned}$$

The results of the study allow any of the four following criteria to be utilized. All criteria are calculated at an in-stream hardness of 334 mg/L.

C _{cst} = 35.9 µg/L	Statewide criterion
S _{cst} = 677 µg/L	Option 1
S _{cst} = 94.0 µg/L	Option 2
S _{cst} = 416.0 µg/L	Option 3 (Recommended in OG&E study)
C _{ast} = 59.8 µg/L	Statewide criterion
S _{ast} = 1128 µg/L	Option 1
S _{ast} = 156.0 µg/L	Option 2
S _{ast} = 692.0 µg/L	Option 3 (Recommended in OG&E study)

The discharger may choose the above criterion it wishes to use for discharge permit calculations.

5. City of Poteau Discharge to Poteau River at SE 1/4 of NW 1/4 of Section 30, T 7 N, R 26 EIM, LeFlore County, Oklahoma

A. Copper

A site-specific criteria modification study has been satisfactorily completed for copper for the City of Poteau discharge to the Poteau River.

$$FWER_t = 0.1850$$

$$FWER_d = 0.1765$$

$$f = 0.2969$$

The results of the study allow any of the four following criteria to be utilized. All criteria are calculated at an in-stream hardness of 25.75 mg/L.

$$C_{cst} = 4.02 \mu\text{g/L} \quad \text{Statewide criterion}$$

$$S_{cst} = 21.73 \mu\text{g/L} \quad \text{Option 1}$$

$$S_{cst} = 13.0 \mu\text{g/L} \quad \text{Option 2}$$

$$S_{cst} = 73.66 \mu\text{g/L} \quad \text{Option 3 (Recommended in Poteau study)}$$

$$C_{ast} = 5.35 \mu\text{g/L} \quad \text{Statewide criterion}$$

$$S_{ast} = 28.92 \mu\text{g/L} \quad \text{Option 1}$$

$$S_{ast} = 17.31 \mu\text{g/L} \quad \text{Option 2}$$

$$S_{ast} = 98.09 \mu\text{g/L} \quad \text{Option 3 (Recommended in Poteau study)}$$

The discharger may choose the above criterion it wishes to use for discharge permit calculations.

B. Zinc

A site-specific criteria modification study has been satisfactorily completed for zinc for the City of Poteau discharge to the Poteau River.

$$FWER_t = 0.4040$$

$$FWER_d = 0.4276$$

The results of the study allow any of the four following criteria to be utilized. All criteria are calculated at an in-stream hardness of 25.75 mg/L. However, option 1 was deemed sufficient to provide relief from a zinc limit in the discharge permit.

$$C_{ast} = 37.95 \mu\text{g/L} \quad \text{Statewide criterion}$$

$$S_{ast} = 93.95 \mu\text{g/L} \quad \text{Option 1 (Recommended in Poteau study)}$$

C. Cadmium

A site-specific criteria modification study has been satisfactorily completed for cadmium for the City of Poteau discharge to the Poteau River. **[Effective as state water quality criteria only; not effective for Clean Water Act programs.]**

$$FWER_t = 0.2427$$

$$FWER_d = 0.2400$$

The results of the study allow any of the following criteria to be utilized. All criteria are calculated at an in-stream hardness of 25.75 mg/L.

$C_{cst} = 0.39 \text{ } \mu\text{g/L}$ Statewide criterion
 $S_{cst} = 1.61 \text{ } \mu\text{g/L}$ Option 1
 $S_{cst} = 0.38 \text{ } \mu\text{g/L}$ Option 2
 $S_{cst} = 1.58 \text{ } \mu\text{g/L}$ Option 3 (Recommended in Poteau study)

$C_{ast} = 7.30 \text{ } \mu\text{g/L}$ Statewide criterion
 $S_{ast} = 30.08 \text{ } \mu\text{g/L}$ Option 1
 $S_{ast} = 7.31 \text{ } \mu\text{g/L}$ Option 2
 $S_{ast} = 30.46 \text{ } \mu\text{g/L}$ Option 3 (Recommended in Poteau study)

The discharger may choose the above criterion it wishes to use for discharge permit calculations.

D. Silver

A site-specific criteria modification study has been satisfactorily completed for silver for the City of Poteau discharge to the Poteau River. **[Effective as state water quality criteria only; not effective for Clean Water Act programs.]**

$FWER_t = 0.2075$
 $FWER_d = 0.2908$

The results of the study allow any of the following criteria to be utilized. All criteria are calculated at an in-stream hardness of 25.75 mg/L.

Statewide chronic criteria are available for this parameter.

$C_{ast} = 0.39 \text{ } \mu\text{g/L}$ Statewide criterion
 $S_{ast} = 1.88 \text{ } \mu\text{g/L}$ Option 1
 $S_{ast} = 0.94 \text{ } \mu\text{g/L}$ Option 2
 $S_{ast} = 3.24 \text{ } \mu\text{g/L}$ Option 3 (Recommended in Poteau study)

The discharger may choose the above criterion it wishes to use for discharge permit calculations.

E. Lead

A site-specific criteria modification study has been satisfactorily completed for lead for the City of Poteau discharge to the Poteau River. **[Effective as state water quality criteria only; not effective for Clean Water Act programs.]**

$FWER_t = 0.1782$
 $FWER_d = 0.1828$

The results of the study allow any of the following criteria to be utilized. All criteria are calculated at an in-stream hardness of 25.75 mg/L.

$C_{cst} = 0.57 \mu\text{g/L}$ Statewide criterion
 $S_{cst} = 3.20 \mu\text{g/L}$ Option 1
 $S_{cst} = 0.59 \mu\text{g/L}$ Option 2
 $S_{cst} = 3.25 \mu\text{g/L}$ Option 3 (Recommended in Poteau study)

$C_{ast} = 14.52 \mu\text{g/L}$ Statewide criterion
 $S_{ast} = 81.48 \mu\text{g/L}$ Option 1
 $S_{ast} = 15.15 \mu\text{g/L}$ Option 2
 $S_{ast} = 82.88 \mu\text{g/L}$ Option 3 (Recommended in Poteau study)

The discharger may choose the above criterion it wishes to use for discharge permit calculations.

6. City of Heavener Discharge to Morris Creek at SE 1/4 of NW 1/4 of Section 30, T 7 N, R 26 EIM, LeFlore County, Oklahoma: Copper

A site-specific criteria modification study has been satisfactorily completed for copper for the City of Heavener discharge to Morris Creek.

$FWER_t = 0.1294$
 $FWER_d = 0.1216$
 $f = 0.8595$

The results of the study allow any of the four following criteria to be utilized. All criteria are calculated at an in-stream hardness of 25.75 mg/L.

$C_{cst} = 4.02 \mu\text{g/L}$ Statewide criterion
 $S_{cst} = 31.07 \mu\text{g/L}$ Option 1
 $S_{cst} = 4.68 \mu\text{g/L}$ Option 2
 $S_{cst} = 38.50 \mu\text{g/L}$ Option 3 (Recommended in Morris Ck. study)

$C_{ast} = 5.35 \mu\text{g/L}$ Statewide criterion
 $S_{ast} = 41.34 \mu\text{g/L}$ Option 1
 $S_{ast} = 6.22 \mu\text{g/L}$ Option 2
 $S_{ast} = 51.19 \mu\text{g/L}$ Option 3 (Recommended in Morris Ck. study)

The discharger may choose the above criterion it wishes to use for discharge permit calculations.

7. City of Broken Bow to Unnamed Tributary of Yanubbe Creek at SE 1/4 of SE 1/4 of Section 18, T 6 S, R 24 EIM, McCurtain County, Oklahoma (Latitude 34° 01' 37.165" North, Longitude 94° 43' 22.270" West)

A. Copper

A site-specific criteria modification study has been satisfactorily completed for copper for the City of Broken Bow Public Works Authority discharge to Unnamed Tributary of Yanubbe Creek. All criteria are calculated at an in-stream hardness of 34.9 mg/L.

$$\begin{aligned}\text{FWER}_t &= 0.0995 \\ \text{FWER}_d &= 0.1253 \\ f &= 0.6544\end{aligned}$$

The results of the study allow any of the four following criteria to be utilized

$C_{\text{cst}} = 5.20 \text{ } \mu\text{g/L}$	Statewide criterion
$S_{\text{cst}} = 52.28 \text{ } \mu\text{g/L}$	Option 1
$S_{\text{cst}} = 7.628 \text{ } \mu\text{g/L}$	Option 2
$S_{\text{cst}} = 60.87 \text{ } \mu\text{g/L}$	Option 3
$C_{\text{ast}} = 7.12 \text{ } \mu\text{g/L}$	Statewide criterion
$S_{\text{ast}} = 71.58 \text{ } \mu\text{g/L}$	Option 1
$S_{\text{ast}} = 10.45 \text{ } \mu\text{g/L}$	Option 2
$S_{\text{ast}} = 83.34 \text{ } \mu\text{g/L}$	Option 3

B. Zinc

A site-specific criteria modification study has been satisfactorily completed for zinc for the City of Broken Bow Public Works Authority discharge to Unnamed Tributary of Yanubbe Creek. All criteria are calculated at an in-stream hardness of 34.9 mg/L.

$$\begin{aligned}\text{FWER}_t &= 0.6312 \\ \text{FWER}_d &= 0.7502 \\ f &= 0.7343\end{aligned}$$

$C_{\text{ast}} = 49.11 \text{ } \mu\text{g/L}$	Statewide criterion
$S_{\text{ast}} = 77.77 \text{ } \mu\text{g/L}$	Option 1
$S_{\text{ast}} = 65.32 \text{ } \mu\text{g/L}$	Option 2
$S_{\text{ast}} = 86.87 \text{ } \mu\text{g/L}$	Option 3

G. Site-Specific Criteria for Parameters Other Than Metals

The purpose of site-specific criteria investigations may not necessarily be intended to prevent toxicity as a result of the substance of concern. Various substances may produce various types of adverse impacts in the environment. For example, minerals may produce a toxic response due to ionic imbalance while nutrients may produce various impacts depending upon algal response to various conditions within the system. Examples of such systems include those where there may be

nitrogen, phosphorus or light limitations. Resulting site-specific criteria may involve seasonal, spatial or other limitations as well as specific numeric limitations.

"Waterbody-specific" criteria, such as certain nutrients in waters designated SWS or SWS-R, or segment-specific metals, may not have limitations on its applicability. Rather, it may be used a substitute for other applicable statewide criteria.

Development of site-specific criteria for minerals should follow approved methods. Certain cases may require additional data or justification, but approved guidance documents should provide sufficient basic guidance for the development of site-specific criteria.

Development of site-specific criteria for parameters other than metals or minerals and lacking specific guidance documents will require extensive coordination with technical staff from DEQ and the permitting authority. Such coordination will require, at a minimum, a workplan addressing project goals, collection and testing methods, quality assurance measures and output schedules. This workplan will need to be reviewed and approved by DEQ and the permitting authority prior to initiation of any work.

Those instances in which site-specific phosphorus or nitrogen criteria may be promulgated pursuant to OAC 252:730-5-10(7) titled "Chlorophyll-a numerical criterion for certain waters" will be limited to those waterbodies that have been shown to be impaired by nutrients and a numeric nutrient criterion has been determined to be the best way to affect reductions in the target nutrient. Such a demonstration will follow procedures outlined in OAC 252:740-15-10. Criteria may be derived from the result of "Clean Lake Studies" or other site-specific investigations performed by an agency of competent authority or a designee.

In cases where toxicity may be a concern due to the parameter in question, toxicity testing using two different species is required. Such testing should comply with the procedures detailed in OAC 252:690 and approved guidance. Exceptions to or deviations from these protocols should be brought to the attention of DEQ and the permitting authority prior to completion of the testing and thoroughly detailed in the final report.

H. Site-Specific Criteria for Nutrients Which Have Been Developed for Particular Waterbodies

(reserved)

I. Site-Specific Criteria for Other Parameters Which Have Been Developed for Particular Waterbodies

1. American Electric Power discharge to a tributary of Nine Mile Creek and Nine Mile Creek upstream of the confluence with East Cache Creek at Section 4, T 1 S, R 11 WIM, Comanche County.

A site-specific mineral study has been satisfactorily completed on these waterbodies indicating that the actual agricultural uses of the waterbody are capable of tolerating more mineral input than currently allowed by the default values in Appendix F for segment

311300. The following criteria are allowed for the protection of the actual agricultural usage of the water.

	<u>Total Dissolved Solids</u>	<u>Sulfate</u>	<u>Chloride</u>
Yearly mean standard (mg/L)	1680	338	499
Sample standard (mg/L)	2100	423	624

**APPENDIX F. STATISTICAL VALUES OF THE HISTORICAL DATA FOR MINERAL
CONSTITUENTS OF WATER QUALITY (BEGINNING OCTOBER 1976 ENDING
SEPTEMBER 1983, EXCEPT AS INDICATED) [NEW]**

The numbers in the "Segment" column on the far left of this Appendix refer to "WQM Segment" numbers which are described in the Introduction to Appendix A of this Chapter. Wherever a segment appears that is identified with an eight-digit segment number, such segment is a sub-watershed of the preceding six-digit WQM Segment. Details of the locations of these sub-watersheds are available from the Department of Environmental Quality. The numbers in the "Monitoring Station" column refer to the abbreviated numbers of the monitoring stations administered by the U.S. Geological Survey ("USGS"); to change an abbreviated number to the complete number used by the USGS, add the prefix digits "07" and add suffix digits of zeroes in order to produce an eight-digit number. In some cases, "Ambient Trend Monitoring" ("ATM") stations were used from streams where no USGS gauge was located. Numbering of these ATM stations complied with the USGS numbering format. The ATM station data have been considered for all stations, including USGS gauges, where available and have been incorporated into the results for that segment where appropriate. The letters "AVG" in the "Monitoring Station" column indicate an average wherever there are multiple monitoring stations in a WQM Segment; the numbers to the right of the "AVG" represent the averages of the historical data for the various monitoring stations.

(4)	Data collected 1998 through 2003							

APPENDIX G. NUMERICAL CRITERIA TO PROTECT BENEFICIAL USES [NEW]

(a) **Introduction.** This Appendix prescribes numerical limits for certain criteria which are necessary to protect beneficial uses as and wherever designated. Table 1 is a chart that states the numerical limits to protect the beneficial use and subcategories of Fish and Wildlife Propagation for the single parameter of dissolved oxygen as set forth in OAC 252:730-5-12(f)(1). The latter limits vary depending upon several factors including the pertinent subcategory or fishery class, the time of the year, and the seasonal temperature. Table 2 prescribes the numerical limits for certain substances or parameters in order to protect beneficial uses and subcategories as set forth in OAC 252:730-5-10(1), 252:730-5-10(6), 252:730-5-12(f)(6), and 252:730-5-20. The numerical limits may vary from one beneficial use or subcategory to another according to how the criteria are required by OAC 252:730 or OAC 252:740 to be implemented.

For the Fish and Wildlife Propagation criteria in Table 2, unless otherwise noted, the acute criterion is the Criterion Maximum Concentration (CMC) applied as a one-hour average concentration, and the chronic criterion is the Criterion Continuous Concentration (CCC) applied as a 96-hour (4 days) average concentration. The CMC and CCC criteria may not be exceeded more than once every three years on the average. Footnotes 1 and 2, associated with 14 pollutants in Table 2, provide exceptions to the duration and frequency components described in this paragraph.

Table 3 is a chart that sets forth conversion factors that can be used to determine Fish and Wildlife Propagation criteria for dissolved metals (where not already expressed as dissolved criteria in Table 2) in order to protect the beneficial use of Fish and Wildlife Propagation and all its subcategories as set forth in OAC 252:730-5-12(f)(6)(H).

(b) **Explanations for abbreviations and certain terms in Tables.**

- (1) "CAS #" refers to a parameter's Chemical Abstract Service registry number. Each of these numbers is a unique identifier of a particular compound with a particular structure; the number provides additional and further specificity for the parameter in question than simply identifying it by a systematic, generic, proprietary, or [trivial] name. The CAS number has no particular chemical significance.
- (2) Equations are prescribed for those substances the toxicity of which varies with water chemistry.

TABLE 1.

**Dissolved Oxygen Criteria to Protect Fish and Wildlife Propagation
and All Subcategories Thereof ¹**

SUBCATEGORY OF FISH AND WILDLIFE PROPAGATION (FISHERY CLASS)	DATES APPLICABLE	DO CRITERIA⁴ (MINIMUM) (mg/L)	SEASONAL TEMPERATURE (°C)
Habitat Limited Aquatic Community			
Early Life Stages	4/1 - 6/15	4.0	25 ³
Other Life Stages			
Summer Conditions	6/16 - 10/15	3.0	32
Winter Conditions	10/16 - 3/31	3.0	18
Warm Water Aquatic Community⁵			
Early Life Stages	4/1 - 6/15	6.0 ²	25 ³
Other Life Stages			
Summer Conditions	6/16 - 10/15	5.0 ²	32
Winter Conditions	10/16 - 3/31	5.0	18
Cool Water Aquatic Community & Trout			
Early Life Stages	3/1 - 5/31	7.0 ²	22
Other Life Stages			
Summer Conditions	6/1 - 10/15	6.0 ²	29
Winter Conditions	10/16 - 2/28	6.0	18

¹ For use in calculation of the allowable load.

² Because of natural diurnal dissolved oxygen fluctuation, a 1.0 mg/l dissolved oxygen concentration deficit shall be allowed for not more than eight (8) hours during any twenty-four (24) hour period.

³ Discharge limits necessary to meet summer conditions will apply from June 1 of each year. However, where discharge limits based on Early Life Stage (spring) conditions are more restrictive, those limits may be extended to July 1.

⁴ DO shall not exhibit concentrations less than the criteria magnitudes expressed above in greater than 10% of the samples as assessed across all life stages and seasons.

⁵ For Lakes, the warm water aquatic community dissolved oxygen criteria expressed above are applicable to the surface waters.

TABLE 2.
Numerical Criteria to Protect Beneficial Uses and All Subcategories Thereof

PARAMETER	CAS #	Fish & Wildlife Propagation		Public & Private Water Supply (Raw Water)	Fish Consumption (+ Other Organisms) and Water	Fish Consumption (+ Other Organisms)
		ACUTE	CHRONIC			
		ug/L	ug/L	ug/L	ug/L	ug/L
INORGANICS						
Arsenic III	7440382	340	150	40		205.0
Barium	7440393			1000		
Cadmium (Dissolved)	7440439	$e(1.0166[\ln(\text{hardness})] - 3.924) * [1.136672 - 0.041838 \ln(\text{hardness})]$	$e(0.7409[\ln(\text{hardness})] - 4.719) * [1.101672 - 0.041838 \ln(\text{hardness})]$	20	14.49	84.13
Chromium (total)				50	166.3	3365.0
Chromium (III) (Dissolved)	16065831	$e(0.819[\ln(\text{hardness})] + 3.7256) * 0.316$	$e(0.819[\ln(\text{hardness})] + 0.6848) * 0.860$			
Chromium (VI) (Dissolved)	18540299	16	11			
Copper	7440508	$e(0.9422[\ln(\text{hardness})] - 1.3844)$	$e(0.8545[\ln(\text{hardness})] - 1.386)$	1000		
Cyanide	57125	45.93	10.72	200		
Fluoride @ 90° F				4000		
Lead	7439921	$e(1.273[\ln(\text{hardness})] - 1.460)$	$e(1.273[\ln(\text{hardness})] - 4.705)$	100	5.0	25.0
Mercury	7439976	2.4	1.302	2	0.050	0.051
Nickel (Dissolved)	7440020	$e(0.846[\ln(\text{hardness})] + 2.255) * 0.998$	$e(0.8460[\ln(\text{hardness})] + 0.0584) * 0.997$		607.2	4583.0
Nitrates (as N)	14797558			10,000		
Selenium	7782492	20.0	5	10		
Silver (Dissolved)	7440224	$e(1.72[\ln(\text{hardness})] - 6.59) * 0.85$		50	104.8	64620.0

		(Footnote 1)				
Thallium	7440280	1400.0 (Footnote 2)			0.24	0.47
Zinc (Dissolved)	7440666	$e(0.8473[\ln(\text{hardness})] + 0.884) * 0.978$		5000		
<p>1 This criterion is based on EPA 304(a) recommendations issued in 1980 that were derived using guidelines that differed from EPA's 1985 <i>Guidelines for Deriving Numerical National Water Quality Criteria for the Protection of Aquatic Organisms and Their Uses</i> (1985 Guidelines), which update minimum data requirements and derivation procedures. Therefore, the acute criterion (CMC) may not be exceeded at any time and the chronic criterion (CCC) may not be exceeded based on a 24-hour average. However, the acute criterion may be applied using a one hour averaging period not to be exceeded more than once every three years on the average, if the acute value given in Table 2 is divided by 2 to obtain a value that is more comparable to an acute criterion derived using the 1985 Guidelines.</p> <p>2 This criterion was adopted as a magnitude value only.</p>

APPENDIX H. BENEFICIAL USE DESIGNATIONS FOR CERTAIN LIMITED AREAS OF GROUNDWATER [NEW]

A. Within Oklahoma there are some bodies or areas of groundwater the quality of which is not suitable for the beneficial uses that are designated on a default basis in OAC 252:730-7-3(b). In most cases this unsuitability is caused by natural conditions or irreversible human-induced impacts such as pollution. Consequently, it is necessary to provide for beneficial use designations for these limited areas of groundwater which are more accurate and appropriate than the default designations in OAC 252:730-7-3(b). The absence of an area of a groundwater formation from this appendix does not indicate that area is free from contamination or has quality suitable for any beneficial use.

B. The groundwater formations or portions thereof that require special designations are identified in the tables that follow in this Appendix. The groundwater formations or units are identified by their name (e.g., "Garber Wellington") and legal description (e.g., "2-4, 9-11, 13-16 T2N R20W " denoting section(s), Township and Range). The area identified may be localized and not necessarily inclusive of the entire hydrogeologic basin or groundwater formation. The tables also set forth a general description of the physical location above the groundwater formation or unit for use as a general point of reference. The tables also set forth columns to show the groundwater classifications and beneficial uses which are designated for each identified area of groundwater. A "Depth Zone" also is indicated, to which the beneficial uses and "Remarks" listed in following columns are applicable.

C. Designations of beneficial uses for an identified groundwater formation or portion thereof are reflected in the tables by the presence of a dot ("•") in the columns to the right of the groundwater name and location. An empty space in a column means that column's beneficial use or subcategory thereof is not designated for that groundwater. Groundwater not identified in this Appendix is subject to the default designations detailed in OAC 252:730-7-3.

D. The state environmental agency that requested the groundwater formation or unit to be so identified and designated with certain beneficial uses and/or limitations is shown in the column headed "Agency". A specific division within that agency may also be listed. Questions relating to the quality of the groundwater found in any particular formation or unit, or concerns related to any comment in the "Remarks" column, should be addressed to the agency denoted in the "Agency" column.

E. The presence of any comment in the "Remarks" column denotes special circumstances which are applicable only to the groundwater formation or unit so identified. These comments may refer to certain constituents of the groundwater at that location, special well construction requirements, or other information deemed pertinent by the agency that requested this listing.

F. Definitions

"ACOG" means Association of Central Oklahoma Governments

"Corp Comm" means Oklahoma Corporation Commission

"DEQ" means Oklahoma Department of Environmental Quality

"SEP" means Supplemental Environmental Projects

"RCRA" means Resource Conservation and Recovery Act

"VCP" means Voluntary Cleanup Program

Groundwater formation name (Site name)	Location	Address	Depth Zone (upper-lower limit) feet (ft)	Class* (1-4)	Water Supply	Ag	M&I	Agency	Remarks
Garber Wellington (Thunderhead Hills)	W 1/2 of W 1/2 of Section 20, T 14 N, R 2 WIM; W 1/2 of NW 1/4 and NW 1/4 of SW 1/4 of Section 29, T 14 N, R 2 WIM	Along and 1/4 mile east of Coltrane from Danforth Rd to Sherrywood Rd, Edmond, Oklahoma County	85 - 200 ft deep; 1/4 mile wide by at least 1 3/4 mile long	2		•		Corp Comm, Oil and Gas Div & ACOG	Brine plume moving south about 80 feet/year. Case/cement new wells through upper affected zone.
Garber Wellington (Double Eagle / 4 th St superfund site)	SE 1/4 of Section 35, T 12 N, R 3 WIM and SW 1/4 of Section 36, T 12 N, R 3 WIM	Oklahoma County	0 - 160 ft	2		•	•	DEQ	Brine, chlorinated solvents and hydrocarbons. Special well construction required.

Groundwater formation name (Site name)	Location	Address	Depth Zone (upper-lower limit) feet (ft)	Class* (1-4)	Water Supply	Ag	M&I	Agency	Remarks
Boone (Tar Creek superfund site)	Sections 13, 14, 23, 24, 25, 26, 35, and 36 of T 29 N, R 22 EIM. Sections 13-36 of T 29 N, R 23 EIM. Sections 17-19, W 1/2 of Section 20, W 1/2 of Section 29, and Sections 30-32 of T 29 N, R 24 EIM. Section 1, E 1/2 of Section 2, E 1/2 of Section 11, Section 12, N 1/2 of Section 13, NE 1/4 of Section 14 all in T 28 N, R 22 EIM. Section 1, W 1/2 of Section 5, Section 6, Section 7, W 1/2 of Section 8, NW 1/4 of Section 17, N 1/2 of Section 18 all in T 28 N, R 23 EIM, W 1/2 of Section 5, Section 6 all in T 28 N, R 24 EIM.	Ottawa County	0 - 350 ft	2	•	•	•	DEQ	Toxic metals, special well construction required
Quaternary Terrace (Kingfisher Wellhead Protection Area)	Section 33, SW 1/4 of Section 36 in T 18 N, R 7 WIM. SW 1/4 of Section 1, NW 1/4 and S 1/2 of Section 2, N 1/2 of Section 3, N 1/2 of Section 4, NE 1/4 of Section 11, and Section 12 all in T 17 N, R 7 WIM	Kingfisher County	0 - 100 ft	1	•	•	•	DEQ	Zone 1 Wellhead Protection Area, no pollution sources

Groundwater formation name (Site name)	Location	Address	Depth Zone (upper-lower limit) feet (ft)	Class* (1-4)	Water Supply	Ag	M&I	Agency	Remarks
Southwestern Oklahoma (Altus AFB area)	Sections 34-36 in T 3 N, R 20 WIM. Sections 1-3, Sections 10-15, and Sections 22-24 all in T 2 N, R 20 WIM	North of US 62, eastern edge of City of Altus and entire AFB, Jackson County	0 - 60 ft	3		•	•	OWRB	TCE and by-products, remediation activity in-place
Ogallala (Dobson Ranch)	One square acre within NW 1/4 of Section 17, T11N, R26W IM	State Highway 152, approximately four miles west of Sweetwater, OK, Roger Mills County	0 - 20 ft	2	•	•	•	DEQ - VCP	Restriction on groundwater use within the 1 square mile recorded on a deed notice due to Benzene contamination. See DEQ or county clerk for location details
Quaternary Terrace Deposits - (Cornerstone Shopping Center)	SE 1/4 of Section 16, T 12 N, R 4 WIM, Approx six (6) acres of WEST PARK ADDITION to Oklahoma County, Oklahoma.	3900 N. MacArthur Avenue, Oklahoma City, Oklahoma County, Oklahoma	0 - 22 ft	2	•	•	•	DEQ - VCP	Tetrachloro-ethene - Deed restriction on file. See DEQ or county clerk for location details.

Groundwater formation name (Site name)	Location	Address	Depth Zone (upper-lower limit) feet (ft)	Class* (1-4)	Water Supply	Ag	M&I	Agency	Remarks
Alluvium & Terrace Deposits - (OKC Urban Renewal Phase I)	21.6 acres of the NW 1/4 of Section 3, T 11 N, R 3 WIM	An area bounded to the South of Reno Avenue, East of the BNSF railroad tracks, North of Interstate 40/or its replacement street and west of a line extended from Stiles Avenue to Interstate 40/or its replacement street in Oklahoma City, Oklahoma County, Oklahoma.	0 - 30 ft	2	•	•	•	DEQ - VCP	Deed restriction on groundwater use. See DEQ or county clerk for location details.
Coffeyville Formation (Compass Industries Landfill Superfund site)	SE 1/4 of NE 1/4 and NE 1/4 of SE 1/4 of Section 13, T 19 N, R 11 EIM, and S 1/2 of NW 1/4 and N 1/2 of SW 1/4 of Section 18, T 19 N, R 12 EIM	7600 W 26th St, Tulsa, Tulsa County, Oklahoma	0 - 105 ft	2	•	•	•	DEQ-Superfund	Deed restriction on groundwater use for any purpose. See DEQ or county clerk for location details.

Groundwater formation name (Site name)	Location	Address	Depth Zone (upper-lower limit) feet (ft)	Class* (1-4)	Water Supply	Ag	M&I	Agency	Remarks
Weatherford Member of the Cloud Chief Formation & Rush Springs Sandstone Formation (Oklahoma Refining Company Superfund site)	S 1/2 of SW 1/4 of Section 18, T 5 N, R 9 WIM and NW 1/4 of Section 19, T 5 N, R 9 WIM, and NW 1/4 of Section 19, T 5 N, R 9 WIM, and SE 1/4 of SE 1/4 of Section 13, T 5 N, R 10 WIM and E 1/2 of NE 1/4 of NE 1/4 of Section 24, T 5 N, R 10 WIM	South Baskett St, Cyril, Caddo County, Oklahoma	0 - 145 ft	2	•	•	•	DEQ - Superfund	Deed restriction on disturbing landfill caps and on groundwater use for any purpose due to hydrocarbon contamination. See DEQ or county clerk for location details.
North Canadian Alluvium (Tenth Street Superfund site)	2.931 acres in the NW 1/4 of Section 31, T 12 N, R 2 WIM	3200 NE 10th St Oklahoma City, Oklahoma County, Oklahoma	0 - 20 ft		•	•	•	DEQ - Superfund	Deed restriction on drilling of any type of wells through the landfill cap or into the landfill. See DEQ or county clerk for location details.
North Canadian Alluvium and Garber (Mosley Road Landfill Superfund site)	71.765 acres in NE 1/4 of Section 21, T 12 N, R 2 WIM	Mosely Road Between NE 23 & NE 36 Oklahoma City, Oklahoma County, Oklahoma	0 - 150 ft	2	•	•	•	DEQ - Superfund	Restriction on groundwater use for any purpose. See DEQ or county clerk for location details

Groundwater formation name (Site name)	Location	Address	Depth Zone (upper-lower limit) feet (ft)	Class* (1-4)	Water Supply	Ag	M&I	Agency	Remarks
Tallant Formation (Blackstar Performance)	SE 1/4 of Section 25, T 20 N, R 8 EIM and NE 1/4 of Section 25, T 20 N, R 8 EIM	East of Highway OK-48, about 4 miles north of Highway OK-51 intersection, in Terlton, Pawnee County, Oklahoma	0 - 30 ft; depth of contamination not yet defined.	2	•	•	•	DEQ - RCRA	1,1,1-Trichloroethane and 1,1-Dichloroethene Depth of contamination unknown, private wells to 200 feet are impacted. See DEQ for additional details.
N. Canadian Terrace Deposits underlain by Hennessey Group (OKC Solvent Plume)	Approximately 80 acres in NE 1/4 of Section 27, T 12 N, R 4 WIM and NW 1/4 of Section 27, T 12 N, R 4 WIM	Between NW 23rd and NW 19th and N Meridian and Ann Arbor, Oklahoma City, Oklahoma County, Oklahoma	0 - 30 ft; depth of contamination not yet defined.	2	•	•	•	DEQ -SEP	Tetrachloroethylene (max 1200 ppb) and Trichloroethylene (max 35 ppb). Plume not delineated; private wells impacted. See DEQ for details.

Groundwater formation name (Site name)	Location	Address	Depth Zone (upper-lower limit) feet (ft)	Class* (1-4)	Water Supply	Ag	M&I	Agency	Remarks
Garber-Wellington (Eagle Industries)	Approximately 6 acres in SE 1/4 of Section 7, T 11 N, R 1 WIM	North of SE 29th & West of Westminister Road, Midwest City, Oklahoma County, Oklahoma	0 - 50 ft; depth of contamination not yet defined.	2	•	•	•	DEQ - RCRA	Trichloro-ethylene (max 2280 ppb). Plume not delineated. See DEQ for details.
East Central Oklahoma bedrock	SE 1/4 of SE 1/4 of SE 1/4 of Section 5, T 7 N, R 9 EIM	Hughes County	200 ft; Aerial extent unknown	2	•	•	•	Corp. Comm. O & G Division	Brine affecting aquifer. Disposal well offsetting old (now plugged) oil well was the most likely conduit.
Garber-Wellington Sandstone Formation	NW 1/4 of SE 1/4 of Section 1, T 9 N, R 2 EIM	Pottawatomie County	160 - 200 ft; 20 acres	2	•	•	•	Corp. Comm. O & G Division	Brine affecting aquifer. Now plugged disposal well was the most likely source.

Groundwater formation name (Site name)	Location	Address	Depth Zone (upper-lower limit) feet (ft)	Class* (1-4)	Water Supply	Ag	M&I	Agency	Remarks
Rush Springs Sandstone, Marlow Formation. (Cyril Plume)	Portions of Sections 1 and 12 in T 5 N, R 10 WIM and Sections 6 and 7 in T 5 N, R 9 WIM and Section 36, T 6 N, R 10 WIM and Section 31, T 6 N, R 9 WIM	2-3 miles north of Cyril, Caddo County.	Up to 450 ft deep; some saline ground-water discharge into Little Washita River tributaries. ~960 acre plume	2	•	•	•	Corp Comm, Oil and Gas Div	~960 acre plume moving S-SW @ 90'/year; 30 year monitoring program started in 1999. Cyril municipal wells affected were abandoned.
Blaine (Drummond Flats)	NE 1/4 of Section 33, T 22 N, R 8 WIM	From NE corner of Drummond 4 miles north, 1 west, 1 south and 3/8 west. Near Turkey creek.	20 - 50 ft in affected wells.	2	•	•	•	Corp Comm, Oil and Gas Div	Drummond Flats, water has historical contamination.
Terrace Deposits (Drummond Flats)	SW 1/4 of Section 12, R 21 N, R 9 WIM	From Ames, 1/2 mile east, 4 miles north, 3 3/4 east, north into site.	About 40 ft in affected wells.	2	•	•	•	Corp Comm, Oil and Gas Div	Drummond Flats, water has historical contamination.
Arkansas River Alluvium (Sand Springs Petrochemical Superfund Site)	W 1/2 of NW 1/4 of Section 13, T 19 N, R 11 EIM and NE 1/4 of Section 14, T 19 N, R 11 EIM	Tulsa County	0 - 37 ft	2		•	•	DEQ Land Protection Division	Metals, VOC, Special Well Construction Required.

APPENDIX I. CRITERIA FOR GROUNDWATER PROTECTION [NEW]

Table 1. Numerical criteria to protect the Public Water Supply and Domestic Untreated Water Supply beneficial uses.

Parameter	CAS #	Criteria (µg/L, unless otherwise noted)
Nickel	7440020	140
Acrolein	107028	3.5
Acrylonitrile	107131	0.65
Aldrin	309002	0.021
Chloroform	67663	70
4,4"-DDD	72548	1.5
4,4'-DDT	50293	1
Dichlorobromomethane	75274	5.6
Dieldrin	60571	0.022
Perchlorate	7601-90-3	4.9
Phenol	108952	4,200
Bis(2-ethylhexyl)phthalate (BEHP)	117817	25
Butylbenzyl phthalate	85687	1,400
Diethyl Phthalate	84662	5,600
Dimethyl Phthalate	131113	70,000
Di-n-Butyl Phthalate	84742	700

Table 2. Secondary drinking water contaminants and associated criteria as listed in 40 CFR 143.3.

Parameter	Criteria
Aluminum	0.05 to 0.2 mg/l
Chloride	250 mg/l
Color	15 color units
Copper	1.0 mg/l
Corrosivity	Non-corrosive
Fluoride	2.0 mg/l
Foaming Agents	0.5 mg/l
Iron	0.3 mg/l
Manganese	0.05 mg/l
Odor	3 TON (threshold odor number)
pH	6.5 – 8.5
Silver	0.1 mg/l
Sulfate	250 mg/l
Total Dissolved Solids (TDS)	500 mg/l
Zinc	5.0 mg/l
